P R E F A C E

The fourth decennial Population Census was conducted from Ist to 15th March, 1981. This preceded by the first ever fullfledged Housing Census from Ist to 15th December, 1980. In the Population Census, two questionnaires were used; a short one (Annexure–A) containing questions on names of household members, their relationship to head of household, sex, age, marital status, religion, literacy, ability to read the Holy Quran (for Muslims only), educational attainment and language spoken in the household and a long one (Annexure–B) which included all questions of the short questionnaire and some more namely, field of education, district of previous residence, duration of residence at present district, activity, employment status, occupation, industry, disability, etc. The long questionnaire was used for households selected on probability basis. The sample covered 4.9 per cent of households in rural areas and 12.0 per cent in urban areas.

This report comprises four parts. In part–I, general description of the district and the main findings of the 1980 Housing Census and the 1981 Population Census have been highlighted. Part–II and Part–III consist of Statistical Tables of the Housing Census and the Population Census respectively. In Part–IV, various annexures mentioned in the text of this report have been given.

The tabulation of topics common in both the questionnaires pertains to complete enumeration, whereas tabulation of additional topics in the long questionnaire are the estimates based on the sample data.

The number and scope of statistical tables have been extended and cover data from the Housing Census (Annexure–D) also. Definitions and concepts of the topics in the questionnaires and tables are given at annexure–E. Map of Sialkot district is at annexure–I.

Population census, conducted once in a decade, is a gigantic operation of immense national importance. This report gives a demographic profile of the district. Thousands of field and office workers have contributed in producing this report. Our Organisation owes a deep debt of gratitude to all those who worked at different stages of census operations and made their inputs for this final output. We hope that the data presented in this report will be used for planning the progress of the people of this district.

GENERAL DESCRIPTION OF THE DISTRICT AND MAIN FINDINGS OF THE CENSUSES

SECTION 1– GENERAL DESCRIPTION OF THE DISTRICT

1.1 Location

Sialkot city takes its name from its headquarters town. It lies from 31°–55′ to 33°– 52′ north latitudes and 74°– 13′ to 75°– 20′ east longitudes. It is bounded on the north by the occupied Jammu and Kashmir, on the east by India, on the south by Sheikhupura and Gujranwala districts and on the west by Gujrat district.

The total area of the district is 5,353 sq.kms.

1.2 Topography

The general aspect of the district is that of a plain, sloping down from the uplands, at the base of the Himalayas, in the north to a level country towards the south-west. The general altitude is about 250 metres above sea level.

Bounded on the north-west by the Chenab and on the south-east by the Ravi, the district is fringed on the either side by a line of fresh alluvial soil, above which rise the low banks that form the limits of the river beds. At an average distance of 25 kilometres from Ravi another stream, the Degh, which rises in the Jammu hills traverses this district and passes on into the district of Sheikhupura. Its north-eastern boundary is at a distance of about 30 kilometres from the outer line of the Himalayas, but the foot-hills stop short of the district and its surface is a level plain broken only by the rivers Chenab and Ravi, by the Aik and Degh streams and a few nullahs that are little more than drainage channels.

The north-west of the district is occupied by the Bajwat, which might be described as an inland delta of the river Chenab traversed by a network of streams which take out of one branch of the river on the north and fall into another branch on the south. The northern branch is joined by the Munawwar Wali Tawi in the north-west of the Bajwat and the southern branch by the Jammu Tawi at its south-eastern corner. Except in times of flood the Bajwat streams are limpid and have pebbly beds and add to the charm of this green well-wooded tract which forms a welcome relief to the brown monotony of the rest of the district.

The Bajwat and the riverains of the Chenab, Degh and Ravi are the most distinctive regions of the district. Elsewhere there are differences in the soil which is generally light and somewhere sandy in the north, fertile in the centre and stiff in the south.

1.3 Climate

The district has extremes of climate. The summer season starts from April and continues till October. The hottest months are May, June and July. The mean maximum and minimum temperatures during these months are 31°C and 26°C respectively. The winter starts from November and continues till March. The mean maximum and minimum temperatures during these months are 20°C and 7°C respectively. The Bajwat area is kept cool by its streams which are fed from the snows, but once the rains commence, it becomes damp.

The average rainfall is about 900 millimetres. The highest rainfall is from July to September.

During the rains, floods generally occur over wide areas. Large tracts of the district remain under water for weeks together and the climate is rendered unhealthy.

The mean maximum and minimum temperatures and precipitation recorded at Sialkot are given in the table below :—

Month	Mean temperature (°C)		Precipitation (millimetres)
	Maximum	Minimum	
January	18.4	5.6	47.0

1.4 Agriculture

In 1979-80, the farm and cultivated area was 533,586 and 442,261 hectares respectively. The net grown area was 428,000 hectares, while the cropped area was 602,000 hectares. The area under forest was only 10,065 hectares.

The Ravi and Chenab rivers flow along the south-eastern and north-western border of Sialkot district respectively. From the Marala Headworks on the river Chenab two canals, viz, Upper Chenab Canal and Marala Ravi Link Canal flows out. The Upper Chenab Canal irrigates parts of Sialkot and Daska tehsils before entering Gujranwala district. The Marala Ravi Link Canal flows for its whole course in the areas of Sialkot, Daska, Pasrur and Narowal tehsils before joining the river Ravi. The B.R.B. irrigates Daska and Pasrur tehsils. Degh, Beid, Aik and Basanter nullahs, also provide water for irrigation when they are in spill. Irrigation is also done by wells, tube-wells and *Jhallars.*

The area and production figures of major crops grown during 1980-81, are given in the table below :—
