PREFACE

The fourth decennial population census was conducted from 1st to 15th March, 1981. This preceded by the first ever fullfledged Housing Census from 1st to 15th December, 1980. In the Population Census, two questionnaires were used; a short one (Annexure-A) containing questions on names of household members, their relationship to head of household, sex, age, marital status, religion, literacy, ability to read the Holy Quran (for Muslims only), educational attainment and language spoken in the household, and a long one (Annexure-B) which included all questions of the short questionnaire and some more, namely, field of education, district of previous residence, duration of residence at present district, activity, employment status, occupation, industry, disability, etc. The long questionnaire was used for households selected on probability basis. The sample covered 100 percent of households in urban areas and 7.5 percent in rural areas.

This report comprises four parts. In Part-I, general description of the district and the main findings of the 1980 Housing Census and the 1981 Population Census have been highlighted. Part-II and Part-III consist of Statistical Tables of the Housing Census and the Population Census respectively. In Part-IV, various annexures mentioned in the text of this report have been given.

The tabulation of topics common in both the questionnaires pertains to complete enumeration, whereas tabulation of additional topics in the long questionnaire are the estimates based on the sample data.

The number and scope of statistical tables have been extended and cover data from the Housing Census (Annexure-D) also. Definitions and concepts of the topics in the questionnaires and tables are given at annexure-E. Map of Kharan district is at annexure-I.

Population Census, conducted once in a decade, is a gigantic operation of immense national importance. This report gives a demographic profile of the district. Thousands of field and office workers have contributed in producing this report. Our Organisation owes a deep debt of gratitude to all those who worked at different stages of census operations and made their inputs for this final output. We also hope that the data presented in this report will be used for planning the progress of the people of this place.

GENERAL DESCRIPTION OF THE DISTRICT AND MAIN FINDINGS OF THE CENSUSES

Section – I GENERAL DESCRIPTION OF THE DISTRICT

1.1 Location

The district of Kharan lies from 26°–52′ to 29°–22′ north latitudes and 62°–47′ to 66°–10′ east longitudes. It is bounded on the north by Chagai district, on the east by Kalat and Khuzdar districts, on the south by Panjgur district and on the west by Iran.

The total area of the district is 48,051 sq. k.m.

1.2 Topography

The district can brodly be divided into two parts, one consisting of bordering hilly areas and the other a central plain. In the north of the district are the Ras Koh range, an extension of the Khawaja Amran off-shoot of the Toba Kakar range. In the east is the Garr or western Jhalwan range, which forms the eastern boundary of Kharan dividing it from Kalat. The Siahan range forms the southern boundary of the district separating it from Panjgur district.

The Kharan plain is a wide plain extending about 300 kilometres in length in east-west direction and about 50 to 125 kilometres in breadth. It varies in elevation from about 750 metres on the north east to about 500 metres on the south-west. The plain forms a basin into which the water of the rivers and streams running from the surrounding hills drains. It finds no outlet to the sea but is absorbed in the sand. The surplus water of heavy floods escapes either to large depressions called Hamuns or smaller basins among the sand hills known as Nawars. Gravel slopes lead from the foots of the mountains. The interior, consisting either of arid waste covered by a sea of rolling sands, interspersed with pebbly plains or of large alluvial areas bordering the upper courses of the rivers.

1.3 Climate

The climate is dry but healthy. Dust storms are experienced throughout the year, but are severe from June to September. These are at time so destructive that animals are killed.

In summer, the day time temperature rises very high but the nights are comparatively cooler. The winter is cold. Kharan receives limited rainfall which is mostly between January and March.

1.4 Agriculture

Agriculture is carried out on traditional patterns on a limited scale. The irrigation is carried out with the help of Karezes, ponds etc. The tube-wells have also been sunk for irrigation purposes.

The agricultural statistics of major crops, grown during 1980-81, are given below:—

Crop/Fruit	Area (hectares)	Production (tonnes)
Wheat	5,500	3,600
