POPULATION AND HOUSING CENSUS 2-18 MARCH, 1998

ADVANCE TABULATION ON SEX, AGE GROUP, MARITAL STATUS, LITERACY AND EDUCATIONAL ATTAINMENT

The fifth Population and Housing Census of Punjab was conducted from 2nd to 18th March, 1998. Soon after its completion, demands for its data started pouring in. Consequently, five bulletins one each at national and provincial level providing data on population by sex upto tehsil level and for individual urban localities were published (provisional) as the same were compiled from the summary sheets prepared by enumerators after completing their assigned areas i.e. blocks.

An early need for some more data on relatively important characteristics namely, sex and age group, marital status, literacy and educational attainment was also realised for policy/planning purposes. It was, therefore, decided to release advance tabulation in the form of bulletins one each at National and Provincial level on the basis of a scientifically selected sample. The overall sample size for Punjab was 1.1 percent of the rural households and 2.1 percent of the urban households in respect of these variables which is also provisional.

Data on sex, age and marital status serves as a basis for estimation and forecasting of population growth and to calculate various demographic indices as a guide for public health and social welfare programme. Literacy and educational data provides a basic inventory of manpower skills and needs for additional education and training. These data when related to data on other economic characteristics provide insight into the factors and processes of social, economic and demographic changes which are very important for the formulation of policy/ planning and administration of programmes for economic and social development.

SEX AND AGE COMPOSITION

The quality of age reporting in the province is not good enough which could be attributed to illiteracy, general ignorance about age and hesitation on the part of respondents to provide accurate ages particularly of females, young children and elderly people. As usual, there is concentration of population at certain age

digits like 0, 5, etc. The following table gives percentage distribution of population of Punjab by sex and five year age group and sex ratios in respect of the last two censuses:-

Age group	1981		1998		1981	1998
	Male	Female	Male	Female	Sex Ratio	
0-4	14.3	15.4	13.8	14.3	102.8	103.7
5-9	15.3	15.5	15.2	15.2	109.2	107.1
10-14	13.4	12.8	12.9	12.9	116.2	107.4
15-19	9.8	9.8	10.1	10.4	111.2	104.5
20-24	7.5	7.7	8.7	9.2	107.5	100.5
25-29	6.5	6.5	7.5	7.4	110.1	107.1
30-34	5.4	5.7	6.7	6.3	104.7	113.0
35-39	4.9	5.3	5.1	4.7	100.9	115.8
40-44	4.5	4.9	4.3	4.5	99.9	100.8
45-49	3.8	3.9	3.5	3.7	109.7	101.2
50-54	3.9	3.5	3.3	3.3	125.1	109.0
55-59	2.1	2.0	2.3	2.2	112.9	113.8
60-64	3.2	2.5	2.3	2.1	143.1	114.1
65-69	1.5	1.2	1.4	1.3	130.2	121.2
70-74	1.8	1.4	1.3	1.1	144.0	147.1
75+	2.2	1.7	1.5	1.3	137.2	121.3
All age groups	100	100	100	100	110.8	106.9

The above table would reveal that population is relatively young as its proportion under 15 years age groups both for males and females is large, though it has slightly declined in 1998 as compared to 1981. The middle age groups i.e. 15-19 to 35-39 are showing proportional increase in contrast to age groups 40-44 to 50-54 which are showing decline and increased again at age group 55-59. the proportion has again nominally declined for advanced age groups i.e., 60 and over except age group 65-69 for females.

The decline in the early age groups population proportion i.e., below 15 could be a positive sign of fertility decline, irrespect of the fact that child mortality might have also improved. However, it is still to be seen that the population have a great potential of growth during the coming period as young people will grow into adults, a potential source of future births. As regards middle age groups the proportional variation could be attributed to carry over of the population which was in the younger age groups in the last census. The decline in the proportion of population in advance age groups i.e. 60 and over could be due to relative over statement of ages or comparative over enumeration in these age groups in the last census or better reporting of ages and enumeration in this census. However, some

typical situations are also observed at certain age groups which may be difficult to explain without going into greater analysis of data of single year age group.

The overall sex ratio (males for every 100 females) have improved to 106.9 in 1998 as compared to 110.8 in 1981. The sex ratio at most of the age groups have also improved in 1998 in comparison to 1981 may be due to better reporting of females in 1998 Census. However, some typical trends are also visible which could be due to errors of age reporting or coverage of either sex in 1981 or 1998 such as 40-44 in 1981 and 20-24 and 40-44 in 1998. The dependency ratio has also improved to 85.6 percent in 1998 which was 93.5 percent in 1981.

MARITAL STATUS

The following table gives the comparative picture of marital status distribution of population of Punjab (15 years and above) by sex and rural/urban areas for the 1981 and 1998 censuses.

Marital Status	1981			1998		
	AREA					
	Total	Rural	Urban	Total	Rural	Urban
Never Married						
Both sexes	25.15	23.51	29.42	31.47	29.80	34.88
Male	30.90	29.30	34.93	36.73	35.66	38.78
Female	18.70	17.16	22.88	25.84	23.76	30.33
Currently Married						
Both sexes	68.37	69.74	64.80	62.40	63.66	59.87
Male	65.26	66.67	61.76	59.46	60.09	58.24
Female	71.86	73.14	68.40	65.59	67.38	61.76
Widowed						
Both sexes	6.11	6.32	5.54	5.69	6.06	4.95
Male	3.57	3.75	3.12	3.58	3.99	2.80
Female	8.95	9.15	8.41	7.96	8.20	7.45
Divorced						
Both sexes	0.35	0.40	0.22	0.38	0.43	0.22
Male	0.25	0.28	0.17	0.20	0.23	0.15
Female	0.46	0.53	0.28	0.58	0.65	0.43

From the above it would be observed that proportion of never married population has increased with a corresponding decrease in the population proportion of currently married both for males as well as females from 1981 to 1998 census. It is however, note worthy that increase in the proportion of never married and decrease in the proportion of currently married is higher for females. This might cause fertility decline in the long run in view of the fact that incidence of marriage has declined.

The overall divorced proportion have marginally increased from 0.35 percent to 0.38 percent during 1981 to 1998 census. As far as differentials for sex are concerned it have declined for male while increased for female. This decline in male could be due to incidence of re-marriage which might be common among them as compared to females. The proportion of widowhood have decreased from 6.11 percent to 5.69 percent which, might be due to mortality decline. The proportion of widowhood is significantly higher in females in comparison to males which again might be due to re-marriage common among males after widowhood.

If we compare rural/urban differentials the percentage of never married is higher in urban areas both in 1981 and 1998 in contrast to the proportion of currently married which is higher in rural areas. The widowed and divorced proportion are relatively higher in rural areas. The marital status distribution in detail by age and sex is given in Table No. 3 by which it would appear that number of never married is increasing at younger ages i.e., 15-19, 20-24 both for males as well as females with a slight edge for males.

LITERACY

The following table gives comparative figures of literacy ratios of population of Punjab (10 years and above) by sex and rural/urban area :

Area	Total			Urban			Rural		
	Both Sexes	Male	Female	Both Sexes	Male	Female	Both Sexes	Male	Female
Punjab									
1998	47.4	58.7	35.3	65.8	73.4	57.2	38.5	51.3	25.1
1981	27.4	36.8	16.8	46.7	55.2	36.7	20.0	29.6	9.4

Punjab's literacy ratio has increased from 27.4 percent in March, 1981 to 47.4 percent in March, 1998, showing an increase of about 73 percent. There are sharp differences in literacy ratios of male and female population with a female literacy showing an overall increase of more than 110 percent. Similarly, there are sharp differences in rural and urban literacy. The increase in rural female literacy is more pronounced which has increased almost just less than three fold. The ratio swings from as high as 73.4 percent for urban males to as low as 25.1 percent for rural females.

EDUCATIONAL ATTAINMENT

Over twenty four million persons were found to be either attending educational institutions or had attended earlier in 1998 census. The percentage distribution by level of education is as under:-

Level of Education	Both Sexes	Male	Female
Below Primary	18.8	17.7	20.9
Primary	31.4	29.5	35.0
Middle	22.2	24.2	18.7
Matric	17.2	18.4	15.1
Intermediate	5.5	5.4	5.7
B.A./B.Sc. & equivalent	3.2	3.2	3.1
M.A./M.Sc. & equivalent or above	1.0	1.1	0.9
Diploma/Certificate	0.3	0.4	0.2
Others	0.3	0.2	0.5

According to the above figures 31.4 percent have passed the primary education, 22.2 percent middle and 17.2 percent matric. After matric the percentage falls to 5.5 for intermediate 3.2 for graduates and only 1.0 for post graduates.

Out of total female population who have passed primary, middle and matric the percentages are 35.0, 18.7 and 15.1 respectively. Amongst total graduates/post graduates 33.9 percent are females.

Dated : January 15, 1999
