PREFACE

The process of urbanization and continuous expansion of cities in terms of population & size has resulted in increasing civic problems. This, naturally, necessitates the availability of precise and detailed data pertaining to urban centers separately to assist the development process in these areas by providing a relevant data base.

Although, the census publications i.e. district, provincial and national reports of the 1998 Census which have already been released carry data by rural/urban areas for all statistical tables, yet there is tremendous demand for exclusive tabulation of data for urban cities, especially the big ones. The requirement is imperative in view of implementation of the Devolution Plan. It has, therefore been felt appropriate to publish separate city reports for big and medium cities, having population of more than 4 lacs and 1 lac to 4 lacs respectively.

The city report consists of five parts viz (1) write up which carries general description of the city, (1I) broad analysis of population census data, (III) broad analysis of housing census data, (IV) statistical tables while (V) provides additional information in the form of annexures.

I hope this report will be a valuable addition to census publications already made available and will serve its purpose well. Any comments in this regard shall be welcomed.

2.2 SEX, AGE AND MARITAL STATUS

2.2.1 Sex Ratio

Number of males per 100 females is termed as sex ratio. The sex ratio of the population of Hyderabad City in 1998 Census showed that there were 110 males against every 100 females. The sex ratio was relatively higher at 127 for cantonment, while it was 109 in municipal corporation areas. The higher sex ratio in cantonment may have been due to higher number of single population living there.

The sex ratio widely differ at various age groups which may possibly be due to age reporting errors. It was the highest at 124.41 for age group 55-59 and lowest for age group of below 5 which does not form a uniform pattern. The sex ratio in cantonment area was considerable high because of higher number of single population in this area. Table 2.4 shows the sex ratio by age group.

2.7 NATIONAL IDENTITY CARD

The National Registration Scheme for Pakistani nationals was introduced in 1973 and information about obtaining of National Identity Cards by the population 18 years and above was asked in the 1998 Census for the first time to access the coverage of National Identity Card scheme. According to the responses to the question it was found that in Hyderabad City 74.23 percent of the population aged 18 years and above had obtained National Identity Card. It was 82.29 percent for males and 64.94 percent for females.

In Hyderabad Cantonment 77.02 percent of the population had obtained National Identity Card 85.05 percent for males and 65.09 percent for females, whereas in Hyderabad Municipal Corporation. 74.02 percent of the population had obtained National Identity Card. The percentage for males was found at 82.05 percent and for females at 64.93 percent. Table 2.21 gives detail by sex and area.

BROAD ANALYSIS OF HOUSING CENSUS DATA

3. BROAD ANALYSIS OF HOUSING CENSUS DATA

3.1 HOUSING STOCK

According to 1998-Census, there were 174,159 housing units in Hyderabad City as compared to 93,274 in 1980-Census showing an increase of 44.44 percent during the intercensal period 1980-1998. Out of total housing units only 6.13 percent were in cantonment while the remaining 93.87 percent were in municipal corporation.

3.1.1 Level of Congestion, Persons and Rooms

Level of congestion in terms of persons per housing unit in Hyderabad City and Cantonment reflects no major difference. Similarly housing setup in term of number of rooms per housing unit did not show any variation.

The percentage of single room housing unit has reduced in Municipal Corporation from 52.52 in 1980 to 45.14 in 1998. On the other hand the percentage of 2 rooms is almost equal in 1980 and 1998. The percentage of housing units of 3 and 4 rooms has increased from 15.21 to 21.32. There are. however, variations between city and cantonment areas which are logical in view of nature of developments taking place under cantonment and city administration. Table 3.1 gives the indices of congestion in 1980 and 1998.

3.1.2 Nature of Tenure

The main tenure category was owned around 70 percent. If we compare tenure figures over time for municipal corporation, the owned category has decreased while that of rented has increased from 1980 to 1998. The rent free has also increased slightly for municipal corporation. If differences in Hyderabad Municipal Corporation and Cantonment for 1998 are taken by tenure, 70.52 percent of the total housing units were owned in Hyderabad Municipal Corporation, the percentage of which in Hyderabad Cantonment was less at 65.12 percent. Table 3.2 shows the nature of tenure and figure 3.1 depicts its graphic presentation.

3.1.3 Period of Construction

Out of the total 122.239 owned housing units enumerated in the Hyderabad City in 1998-Census only 1.71 percent were found under construction whereas 69.04 percent were observed to be constructed 10 years earlier to 1998. The remaining 29.26 percent housing units were constructed in between 1988 and 1998. However, the recent trend of construction of new houses was noticed significantly higher in cantonment area against municipal area. If we compare variations between the figure for 1980 and 1998 the tempo of construction was greater in 1980. Table 3.3 gives the facts in detail:-

3.1.4 Construction Material of Outer Walls

Quality of housing units was determined by enquiring construction material used in the outer walls and roofs of houses. According to 1998 Census, about 94 percent housing units had standard category of walls made of baked bricks/blocks and stones with cement bonding while 4.23 percent had walls of un-baked bricks/earth bond in the city. Remaining categories of houses were made of wood/bamboo or falling under kind of others showed meager percentages at 1.54 and 0.19 percent respectively.

Construction pattern of outer walls in cantonment and municipal areas for the 1998 census did not show significant variation. More than 90 percent of housing units used baked bricks/blocks/stones for the construction of outer walls. However, comparison of municipal area figures of 1998-Census with results of 1980- Census portrayed a picture of improvement in living structures as higher percentage of housing units using baked bricks/stones. Table 3.4 gives detail of construction material used in walls. Figure 3.2 shows these values in a graphic way.

3.1.5 Construction Material of Roofs

More than three fourth of the housing units in Hyderabad City were found to be using the RCC/RBC as construction material for roofs, while 9.55 percent had roofs made of cement/Iron sheet. Houses with roofs made of wood/bamboo had also good percentage at 11.55 percent.

In terms of roof material i.e. RCC/RBC, Municipal Corporation was observed to be in better shape against Cantonment area. The percentage of wood/bamboo was a little higher in cantonment area as compared to municipal areas. Table 3.5 gives detail of material used in roofs. Figure 3.3 depicts these values of city for 1998 census in a graphic presentation.

3.2 HOUSING FACILITIES

3.2.1 Source of Drinking Water

Easy access to potable/safe drinking water is one of the basic human needs. As per information collected in the 1998 Census, in Hyderabad City, the facility of drinking water inside the house was available to around 90 percent of the housing units. The facility inside the house is relatively higher in the municipal area as compared to the cantonment area. The comparison of figures of 1980 and 1998 Censuses in municipal area showed positive signs of improvement as it is available to higher percentage of housing units in 1998 being one of the essential amenity for civic life. Table 3.6 gives detail of the source of drinking water. Figure 3.4 shows the values of city for 1998 census in a graphic way.

3.2.2 Source of Lighting

Electricity was the main single source of lighting in Hyderabad City available to 96.04 percent of the housing units which has gone up from 81.20 percent in 1980. Its percentage availability was relatively higher in M.C. in comparison to cantonment area. Kerosene oil was still being used by 2.61 percent of the households in the city with a little higher percentage in municipal area against cantonment area, its percentage use has significantly reduced in 1998 as compared to 1980. Table 3.7 provides percentage of housing units by source of lighting. Figure 3.5 shows these values in a graphic way for 1998 Census.

3.2.3 Cooking Fuel Used

Slightly more than three fourth percent of the housing units in Hyderabad City used gas for cooking. The use of wood and kerosene oil was at 17.67 and 3.10 percent respectively. Percentage of housing units using gas in municipal area was higher than that of cantonment. In case of wood it was almost same whereas **"Others"** as cooking fuels used has significantly declined in M.C. area in 1998 against the level of 1980. During this period the use of gas has increased by about 7.5 percent. Table 3.8 provides percentage of housing units by source of cooking fuel used. Figure 3.6 reflects city values in a graphic way for 1998 Census.

3.2.4 Availability of Kitchen, Bathroom and Latrine Facilities

In Hyderabad City as a whole 40.54 percent of the housing units had separate kitchen in 1998-Census. The percentage of housing units with shared kitchen was slightly higher at 42.79 percent. The percentage of housing units having no kitchen at all was 16.68. Corresponding facilities in cantonment and municipal areas in case of separate and shared kitchen showed little variation. The percentage of housing units had no kitchen in cantonment was higher at 19.45 against 16.50 percent for municipal area.

Fig : 3.5

HOUSING UNITS (PERCENTAGE) BY SOURCE OF LIGHTING, 1998

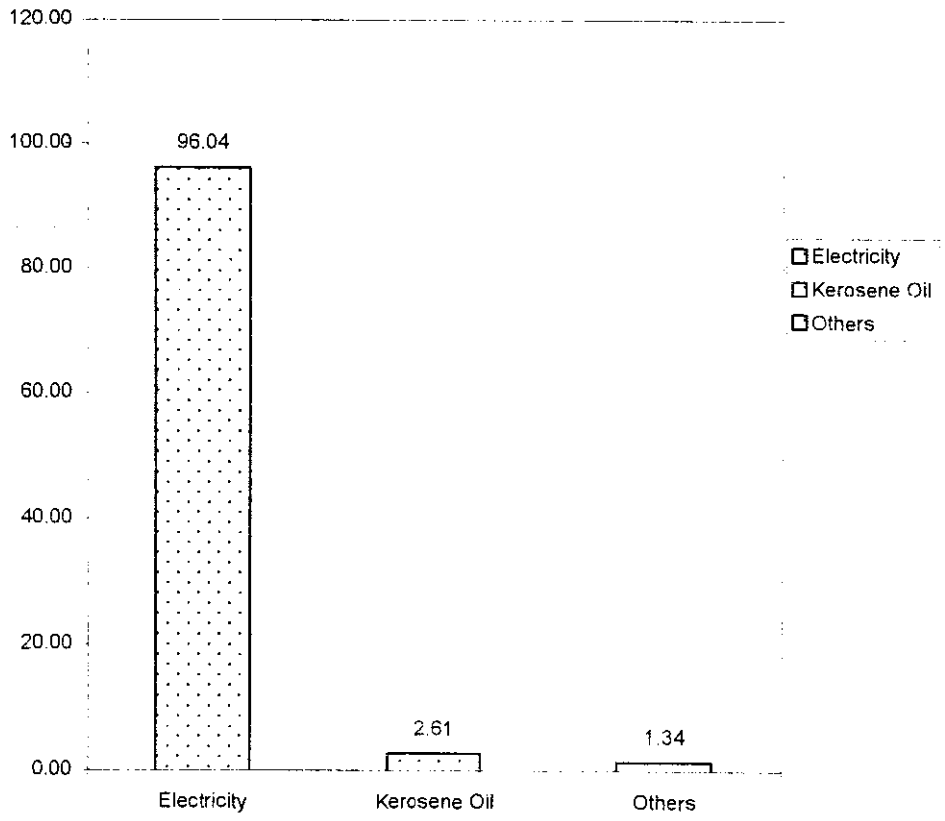

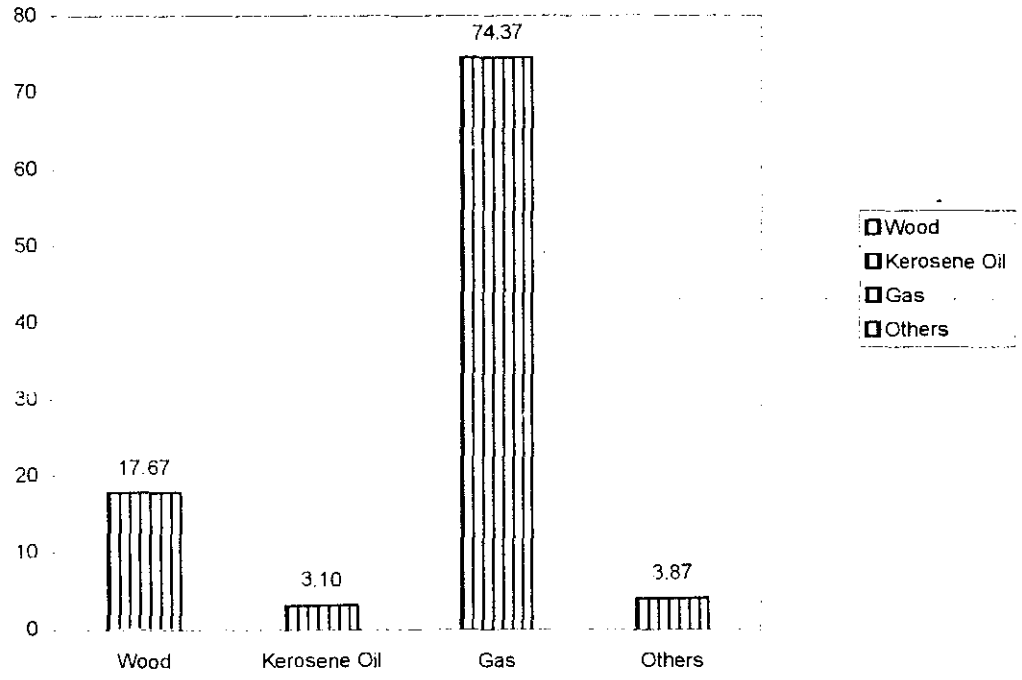

Fig : 3.6

HOUSING UNITS (PERCENTAGE) BY SOURCE OF COOKING FUEL USED, 1998

The shared bath room facility for M.C. area has substantially gone up from 1980 to 1998. On the other hand the category of "None" facility has significantly reduced during the same period. Ironically the separate bath room facility in M.C. area has also reduced.

As far as separate latrine facility as a whole for the city was concerned, it was available to 43.16 percent housing units. The percentage of shared latrine and having no proper latrine was 52.26 and 4.58 respectively. Facilities of separate latrine and shared latrine in housing units of cantonment area were observed to be at 45.73 percent and 52.23 percent respectively against 42.99 percent and 52.27 percent of these categories in municipal areas.

Table 3.9 gives detail of availability of housing facilities in Hyderabad City. Figure 3.7 shows these values in a graphic way.

3.2.5 Source of Information

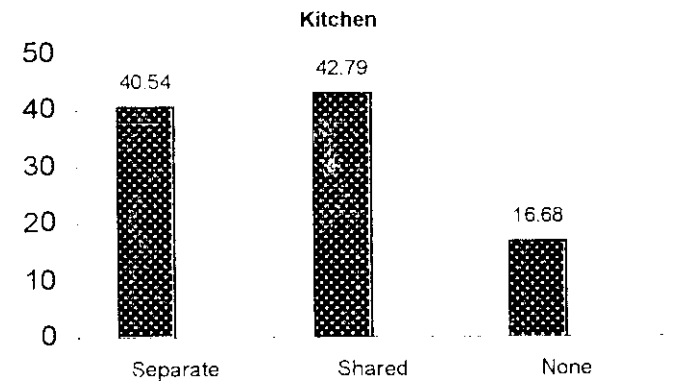

The question about source of information was asked for the first time in 1998 Population Census to assess the media coverage. About ninety four percent of the households in Hyderabad City had access to television, 32.81 percent radio and 46.47 percent newspaper as source of information. These percentages in cantonment were little less for television and radio and little higher for newspaper Table 3.10 provides percentage of housing units by source of information. Figure 3.8 shows these values in a graphic presentation.
