PREFACE

The fourth decennial population census was conducted from 1st to 15th March, 1981. This preceded by the first ever fullfledged Housing Census from 1st to 15th December, 1980. In the Population Census, two questionnaires were used; a short one (Annexure-A) containing questions on names of household members, their relationship to head of household, sex, age, marital status, religion, literacy, ability to read the Holy Quran (for Muslims only), educational attainment and language spoken in the household and a long one (Annexure-B) which included all questions of the short questionnaire and some more, namely, field of education, district of previous residence, duration of residence at present district, activity, employment status, occupation, industry, disability, etc. The long questionnaire was used for households selected on probability basis. The sample covered 2.1 percent of households in urban areas and 6.4 percent in rural areas.

This report comprises four parts. In Part-I, general description of the district and the main findings of the 1980 Housing Census and the 1981 Population Census have been highlighted. Part-II and Part-III consist of Statistical Tables of the Housing Census and the Population Census respectively. In Part-IV, various annexures mentioned in the text of this report have been given.

The tabulation of topics common in both the questionnaires pertains to complete enumeration, whereas tabulation of additional topics in the long questionnaire are the estimates based on the sample data.

The number and scope of statistical tables have been extended and cover data from the Housing Census (Annexure-D) also. Definitions and concepts of the topics in the questionnaires and tables are given at annexure-E. Map of Mardan district is at annexure-I.

Population Census, conducted once in a decade, is a gigantic operation of immense national importance. This report gives a demographic profile of the district. Thousands of field and office workers have contributed in producing this report. Our Organisation owes a deep debt of gratitude to all those who worked at different stages of census operations and made their inputs for this final output. We also hope that the data presented in this report will be used for planning the progress of the people of this place.

Dated : June 6, 1983

GENERAL DESCRIPTION OF THE DISTRICT
AND
MAIN FINDINGS OF THE CENSUSES

SECTION-1 GENERAL DESCRIPTION OF THE DISTRICT

1.1 LOCATION

The district derives its name from its headquarters town Mardan. It was a part of Peshawar district till 1937. Later, Mardan and Swabi Tehsils were separated to form Mardan district. Subsequently the Tribal Area of Gadoon was also merged with Mardan district.

The district lies from 33°-54′ to 34°-32′ north latitudes and 71°-49′ to 72°-50′ east longitudes. It is bounded on the north by Swat district and Malakand Protected Area, on the east by river Indus across which lie Abbottabad and Attock districts, on the south by Peshawar district and on the west also by Peshawar district and Malakand Protected Area.

The total area of the district is 3,137 sq. km.

1.2 TOPOGRAPHY

Geographically, Mardan district may broadly be divided into two parts—north-eastern hilly area, and south western plain. The entire northern side of the district is bounded by the hills. In Mardan Tehsil, the highest point in these hills are Pajja or Sakra, 2,056 metres high and Garo or Pato, 1,816 metres high. In Swabi Tehsil, the hills are the extension of those of the Naranji hills and are locally known as the Mahaban hills. Most of the hilly area of Swabi Tehsil is in the former tribal area of Gadoon. The south-western half of Mardan district is mostly composed of fertile plain with low hills strewn across it. It is generally accepted that this plain once formed the bed of a lake which was gradually filled up by the load of the river flowing into from the surrounding hills. From the foot hills the plain runs down at first with a steep slope which carried the rain water to the lower levels and ultimately to the Kabul river.

1.3 CLIMATE

The climate of Mardan is hot in summer and cold in winter. High temperatures are recorded in the month of June and July when the mercury shoots up to 46°C on some days. The coldest months are December and January when the day temperature is about 21°C and the minimum frequently falls below freezing point with frost at night. Due to intensive cultivation and artificial irrigation the tract is humid and the heat is oppressive. Most of the rain fall occurs in the months of July, August, December and January. Towards the end of cold weather, there are occasional thunder storms and hail storms. During May and June, dust storms are frequent and usually occur in the evening or at night and bring down the temperature.

Data on temperature and precipitation are not available. However climatic conditions of Mardan district may be interpreted in the light of the following information of Peshawar district which is adjacent to Mardan district and have more or less similar topographic conditions :—

1.4 AGRICULTURE

Mardan is known as the best agricultural area in the country. Its land is very suitable for cultivation of sugar-cane and tobacco and is therefore rightly called the "Land of Sugar-cane and Tobacco".

The main source of irrigation are the canals. The Upper Swat Canal irrigates, mostly, Mardan Tehsil and western part of Swabi Tehsil. The lower Swat Canal irrigates south-western part of Mardan Tehsil. The Pehru Canal flowing in north to south-westerly direction passes through Swabi Tehsil in its middle. Besides, irrigation is done by tube-wells and lift irrigation.
