PREFACE

The fourth decennial population census was conducted from 1st to 15th March, 1981. This preceded by the first ever fullfledged Housing Census from 1st to 15th December, 1980. In the Population Census, two questionnaires were used; a short one (Annexure-A) containing questions on names of household members, their relationship to head of household, sex, age, marital status, religion, literacy, ability to read the Holy Quran (for Muslims only), educational attainment and language spoken in the household and a long one (Annexure-B) which included all questions of the short questionnaire and some more, namely, field of education, district of previous residence, duration of residence at present district, activity, employment status, occupation, industry, disability, etc. The long questionnaire was used for households selected on probability basis. The sample covered 13.0 per cent of households in urban areas and 4.4 per cent in rural areas.

This report comprises four parts. In Part-I, general description of the district and the main findings of the 1980 Housing Census and the 1981 Population Census have been highlighted. Part-II and Part-III consist of Statistical Tables of the Housing Census and the Population Census respectively. In Part-IV, various annexures mentioned in the text of this report have been given.

The tabulation of topics common in both the questionnaires pertains to complete enumeration, whereas tabulation of additional topics in the long questionnaire are the estimates based on the sample data.

The number and scope of statistical tables have been extended and cover data from the Housing Census (Annexure-D) also. Definitions and concepts of the topics in the questionnaires and tables are given at annexure-E. Map of Larkana district is at annexure-I.

Population Census, conducted once in a decade, is a gigantic operation of immense national importance. This report gives a demographic profile of the district. Thousands of field and office workers have contributed in producing this report. Our Organisation owes a deep debt of gratitude to all those who worked at different stages of census operations and made their inputs for this final output. We also hope that the data presented in this report will be used for planning the progress of the people of this place.

GENERAL DESCRIPTION OF THE DISTRICT
AND
MAIN FINDINGS OF THE CENSUSES

SECTION I—GENERAL DESCRIPTION OF THE DISTRICT

1.1 Location

The district takes its name from the headquarters town Larkana. The origin of this name is traced to a tribe known as Lariks.

The district is located from 27° — 08′ to 28° — 00′ north latitudes and 67° — 12′ to 68° — 24′ east longitudes. It is bounded in the north by Kachhi, Nasirabad and Shikarpur districts, in the east by Khairpur district, in the south by Dadu district and in the west by Khuzdar district.

The total area of the district, is 7,423 sq. k.m.

1.2 Topography

The area of the district may be divided into three tracts namely the Kohistan Tract, the Central Canal Irrigated Tract and the Eastern Riverain Tract.

(a) The Kohistan Tract

The Kohistan Tract consists of the entire western side of the district. It is separated by the Central Canal irrigated by a long protective earthen BUND. The area gradually rises towards the west from sandy ground to the hilly areas of Kirthar range. These hills extend along the whole western boundary of the district from north to south, for about 50 to 60 kilometres with the width of about 20 kilometres. The hills consist, of an ascending series of ridges running generally north to south with broad flat valleys in between. The highest ridge of the range is about 1,500 metres above the sea level. The highest peak, is 2,096 metres above sea level. These hills provide good pasture land for sheep and goats rearing.

(b) The Central Tract

The central portion of the district is a low lying vast flat land containing canal irrigated area. The tract is bounded by two protective bunds, one in the west, to stop the hills torrents and the other in the east, to stop the flood water of the Indus river. All the main barrage canals irrigate this tract through various distributaries.

(c) Eastern Tract

This tract lies between the flood protective BUND of the Indus river and the river itself. Most of the land is riverain and is cultivated during the winter season.

1.3 Climate

The district has extremes of climate. It is hot in summer and cold in winter. The net-work of canals and general sub-mersion of soil during summer months add moisture to the heat. The hot months continue upto the end of September or even upto the middle of October, after which nights become cooler and the day temperature also begins to recede. The district being situated far away from the sea, is devoid of sea breeze. The mean maximum and minimum temperature for the summer season is approximately 43°C and 33°C while that of the winter season 21°C and 11°C respectively. The rainfall is poor, the average being 100 to 125 millimetres per year. There are fierce hot winds locally called Challiho which blow continuously for about forty days around the middle of May every year.

Detail data on temperature and precipitation is not available. Following data of Sukkur being adjacent to Larkana, may give an idea of temperature and precipitation of this district.

Month	Mean temperature (°C) Maximum	Minimum	Precipitation (millimetres)

The district is mostly irrigated by a net-work of canals, namely, Rice canal, Dadu canal, Kirthar canal and Wara Branch. Irrigation in some parts is also done by tube-wells.

The area and production figures of major crops and fruits, grown during 1980-81, are given below :—
