PREFACE

The Fifth Population and Housing Census, due in March 1991, was conducted in March 1998 i.e. after a lapse of 7 years from its due date. The entire country was covered from 2-18 March 1998 including Federally Administered Tribal Areas, Northern Areas and Azad Kashmir. During the first three days i.e. from 2nd to 4th March housing units were physically numbered and registered as an inventory for conduct of the census from 5th to 18th March. The inventory also served as a guideline for the supervisors besides ensuring coverage of left out housing units, of listing operation, during the census operation.

Name, age, sex, marital status, educational attainment, relationship with the head of the household, nationality, religion, mother tongue, literacy and possession of National Identity Card were the population topics. Whereas number of households, tenure, period when constructed, construction material of walls and roofs and source of drinking water-inside or outside, source of light, fuels used, type of kitchen, bathroom and toilet facilities and watching of TV, listening to radio and reading of newspapers were the housing units topics. Besides core questions about migration alongwith its reasons, economically active population, fertility, field of education, disability and inoculation of children against 6 diseases were asked about all persons on sample basis.

There were 3 questionnaires designed for registration of housing units and collection of information on population and housing characteristics. Form-1 (Annex-A) was used for registration of housing units. Form-2 i.e. short form (Annex-B) was used for collection of information about all persons on core questions pointed out in the foregoing paragraph. While remaining topics were inquired on sample basis and Form 2-A i.e. long form (Annex-C) was used. Necessary definitions and concepts relating to the above mentioned questionnaires/ forms are given at (Annex-D) for information of our readers.

About 8 per cent single stage stratified sample was drawn with slightly more representation given to small provinces, districts and urban areas to make it a representative sample.

The report consists of five parts viz(I) Write up which carries some general description of the district, (II) Broad analysis of population census data, (III) Broad analysis of housing census data, (IV) comprises statistical tables while part(V) provides additional information about part I to IV in the form of annexures.

The general description covers location, boundaries, area, geography, climate, rainfall, ethnicity, administrative set-up, agriculture, flora and fauna, health, industries, communication system, infra structure, besides introducing the district. The main findings on population characteristics deal with population size, growth and distribution; sex, age and marital status composition; literacy and educational attainment; economic activities, migration, mother

tongue, fertility, disability, possession of National Identity Card, inoculation of children against six diseases and homeless population. Whereas main findings on housing characteristics throw light on housing units/households, information on number of rooms,including population density per housing unit and per room,tenure,period since constructed, construction material used on walls and roofs, source of drinking water,source of light,cooking fuel used in kitchen, availability of kitchen,toilet and bathroom facilities and source of information etc.

Efforts have been made to provide maximum but meaningful data amenable to possible statistical analysis useful for planners, researchers and other users from grass roots to national level. The report comprises 52 tables in all, of which 38 relate to population characteristics, 12 to housing characteristics while two deal with some housing as well as population characteristics. Of 52 tables 27 are based on complete count information while remaining on sample count information. Because of space problem the tables on occupation and industries are in coded form. Therefore, after mentioning occupation and industries in coded form on the tables the details of occupational and industrial groups are appended at Annex-E&F respectively.

Census taking was a gigantic task which involved a large field force drawn from Provincial Government Departments mainly for which active cooperation of concerned officials/officers was highly essential. This report will remain incomplete without acknowledging the efforts made by the field staff, armed forces Jawans and the cooperation extended by their officers especially the Chief Secretary, NWFP and Headquarters Army Air Defence Command Rawalpindi. The credit also goes to officers of Statistics Division and Federal Bureau of Statistics for rendering administrative and technical support. I am personally indebted to the Government who encouraged to conduct the census in March, 1998 and later keen interest taken in releasing the data as early as possible for the benefits of all users. I also thank the donor agencies like UNFPA, UNDP and UNICEF for providing financial assistance in acquiring equipment/machinery and technical support for the conduct of census. It would not be justified to release this report without acknowledging the efforts made by the technical staff of Population Census Organization, in providing technical guidelines, the management services given by the administration, the services support rendered by the secretariat staff

Despite making the best efforts in producing quality output I believe that there is a great room for improvement, therefore, constructive comments/suggestions from all concerned are welcomed.

PART - I
GENERAL DESCRIPTION
OF THE DISTRICT

1. GENERAL DESCRIPTION OF THE DISTRICT

1.1 INTRODUCTION

Shangla, previously a sub-division of Swat district, was upgraded to the status of a district on July, 1, 1995. Shangla hill (Shangla Top), which separates the district from Swat, is the only way of communication between the two districts.

In tribal era this area was known Ghroona and some of the surrounding area as Ghurband. During ex-state regime it was known as Alpuri. But after merger of the state in Pakistan, the new administration and Swati people began to call this area as Shangla Par which was also became the name of the district. Later on the word Par was dropped by the government through a notification.

1.2 LOCATION

The district lies from 34^{0} -31′ to 33^{0} -08′ north latitudes and 72^{0} -33′ to 73^{0} -01′ east longitudes.

1.3 BOUNDARIES

The district is bounded on the east by district Batagram and tribal area of Kala Dahka along which the river Indus flows for about 75 kilometres, on the west by district Swat, on the south by district Buner and tribal area of Kala Dahka and on the north by district Kohistan.

1.4 AREA

The total area of the district is 1586 square kilometres.

1.5 PHYSICAL FEATURES AND TOPOGRAPHY

1.5.1 Physical Features

Shangla district, consists of small valleys, is situated between the hillocks and surrounded by high mountains full of forests. The district being situated on much height above the sea level has thick forests comprising fir, spruce, kail, blue pine, chir and cedar (deodar) trees. These forests are a great source of income.

1.5.2 Topography

The topography of Shangla district is dominated by high mountains and narrow valleys. These mountains are the western extremities of the Great Himalaya range. The general elevation of the district is 2,000 to 3,000 metres above sea level. The highest point is near Kuz Ganrshal in the north of the district, which is 3,440 metres above sea level. The mountain slopes are covered with thick forests. There are narrow valleys allowing some agricultural activities.

1.5.3 Soil

The cultivated soils of Shangla have developed from redeposited loess. The soils are very deep silt-loam and used either for dry farming or irrigated agriculture.

1.5.4 Geology

The area exhibits volcano-sedimentary, assemblages, ale-alkaline platonic, intrusives, ultramafics, garnet granulites and granitic rocks of the island. The Shangla suture zone represents exotic assemblages of serpentinites, blue schists, deformed metavolcanic in a matrix of phyllitic and green schist.

The northern contact of Shangla suture zone with the Kohistan sequence is faulted. The grantitic gneisses of the area has been assigned a cambrian age on Potassium Argun method.

Structurally the area is complex showing thrust faults and tight folds, foliations and lineations. Economically the area is significant for having the mineralization of worlds most beautiful gem variety of emerald. It is found in the Shangla area mined by private agencies.

1.5.5 Mining

District Shangla is full of natural resources, having a vast scope for investment and development. The soap stones, chromite, marble, emerald and many other precious and semi-precious stones' mines are found in this area.

1.8 CLIMATE

District Shangla is at an elevation of 1800 to 3100 metres and as such the winter season remains extremely cold in the upper half of the district while in the lower half it remains moderate. The precipitation in the temperature occure both in the form of rains and snow depending upon the atmospheric conditions. Snow fall generally starts by the end of November on the high peaks of the mountains and descends downwards as the temperature falls further. Snow fall also occurs in the late February and continues some-times upto the middle of the March after which the weather becomes pleasant and usually remains mild during the remaining period of the year. The area situated in Sub-Tehsil Besham and Martung remains very hot in the summer season. Detailed data of temperature and precipitation is not available directly for district Shangla.

There is no meteorological station in Shangla district, therefore, the data of temperature, precipitation and relative humidity recorded at the nearest station Dir are given below:

1.9 ETHNIC STRUCTURE AND HISTORY

1.9.1 History

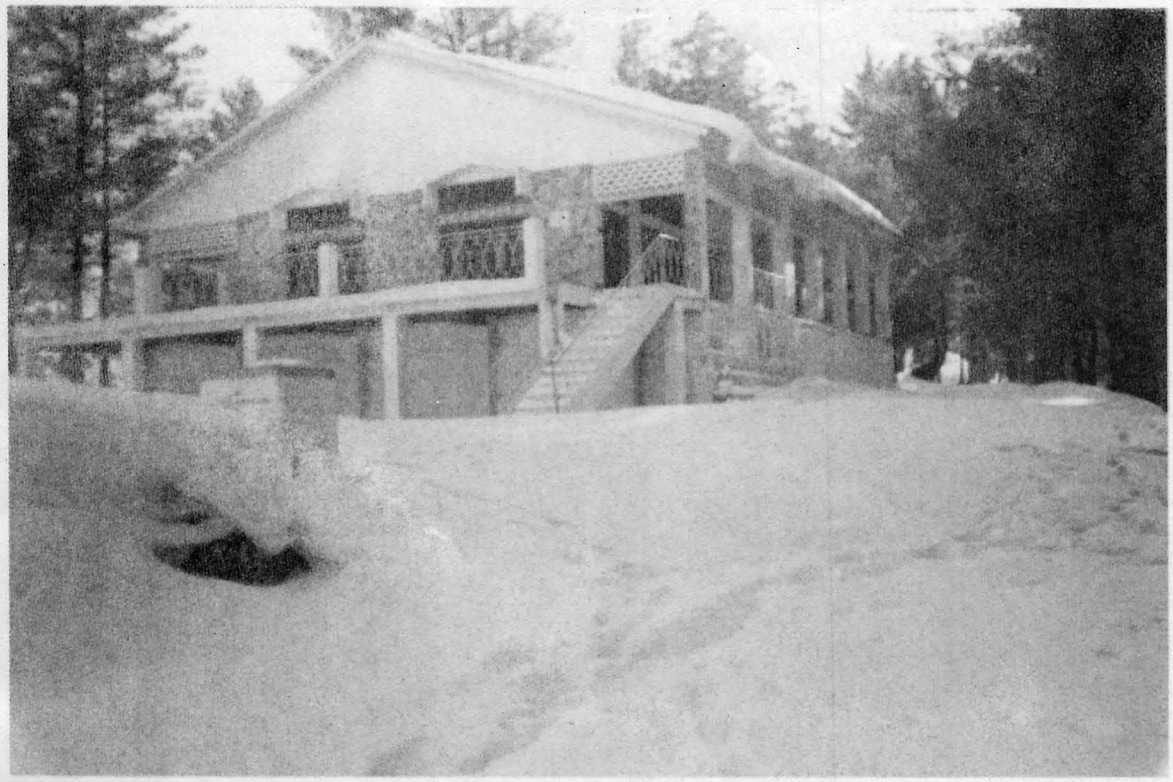

The area had a tribal status. It is said that the preaching of Islam in Shangla was affected by Mahmood Ghaznavi's brave General Khushal Khan in or about 1,000 A.D. When Dalazak Afghans became the rulers of Swat and its allied areas. In or about 1481 A.D. Dalazaks were defeated by the Yousafzai Pathans and the local inhabitants were pushed to the district of Hazara where they are still residing and are known as Swatis. Then followed the period when civil strife and tribal domination was rampant and safety was conspicuous by its absence. During this period, a number of invasions on the state took place, successively by Mughals, Sikhs, Britishers and the adjoining states of Dir and Darband. None of them could, however, establish a stable regime in the area.

A beautiful snow-covered Mosque on the Shangla top.

The influence of the Wali's dynasty started as back as 1836, when Akhund Sahib Abdul Ghafoor, the great grand-father of Miangul Shahzada Abdul Wadood, fought his first religious war against Sikhs. In 1917, Miangul Shahzada Abdul Wadood (Badshah Sahib) father of the ex-ruler was elected as ruler by the public of the areas. In 1924, he established his stable regime in Buner. Similarly some other areas of this district i.e Kana, Ghurband, Lilownai, Besham, Chakesar, Martung and Puran, were brought under his administration in 1926. The British government recognized Miangul Shahzada Abdul Wadood as the ruler of Swat and its allied area on 12th December,1849. He on his own free-will abdicated in favour of his son, Major General(Honorary) Abdul Haq Jehanzeb, the ex-ruler of Swat.

In 1969, the President of Pakistan ordered the merger of the Swat state with the NWFP. The Wali was dethroned and replaced by district administration. The state employees were however, absorbed in the NWFP.

The land settlement was carried out during 1976-1980.

1.9.2 Races and Tribes

Most of the inhabitants are Afghani. The major tribes in the area are given as below:

- Mian
- Qureshi

All the above tribes are inter-mingled with each other in the entire district.

1.10 DRAINAGE

1.10.1 River and Streams

As the winter and summer rains are generally of long durations, plenty of springs and streams flow through out in the district. Water of springs, streamlets and rains, coming from the upper areas of the district joins in Ghawar-Band Kana Khowar, Etai Khowar and Kangala Khowar which ultimately flow into river Indus at Besham, Kabalgram and Jatkool respectively.

1.11 CULTURE

On the day of marriage the male and female members and other relatives and friends of the groom visit the bride's house for carrying palanquin(Doli). The bride is brought in Doli in a big procession called Junj. At that night Nikah (wed-lock) ceremony is performed religiously in the presence of family members.

1.11.7 Births

On the birth of a child i.e boy or girl the Molvi or elder of the family is called to offer Azan (call for prayer) in the child's ears. The members of family presents sweets. After the burial ceremony, the local relatives make arrangements for serving meal to the relatives of deceased family who come from distant places. Male members of the family and close relatives sit there for consecutive three days while acquaintances come during this period to offer Fateha (condolence). After the completion of forty days (Chaliswan) all the relatives and acquaintances again visit the house for Fateha and they are served with meal.

2.2.2 Age Structure

In 1998 the proportion of the infants under one year was 2.0 per cent, children under 5, 16.9 per cent, children under 10 year 34.8 per cent, under 15 year 48.6 per cent of the total population. The proportion of population of working age groups i.e. 15 to 64 years, were recorded as 48.4 per cent and over 65 year 3.0 per cent resulting age dependency ratio of 106.6 per cent. Women of reproduction ages i.e. 15 -49 years, were 43.1 per cent of their total population.

The following table gives percentage of population by selective age groups, sex, urban and rural areas with more detail.

As envisaged from age pyramid the population of Shangladistrict is still very young having broad base implying thereby sustaining of fertility at a very high level. However comparison of age data with the 1981 Census indicates that fertility has started declining resulting reduction in percentage share of children under 5 though the effect of shifting of ages of children under 5, due to misreporting, can not be ruled out. The proportionate share of population declined gradually with advancing in ages and taper off to a narrow peak at age 75 and over.

2.2.3 Marital Status

The population 15 years and above as enumerated in 1998 Census was further classified into never married, married, widowed and divorced. The percentage share of never married male was much higher than the female, being 29.8 and 15.8 per cent respectively. Table 2.6 gives details about percentage of population 15 years and above by marital status, sex and rural and urban residence, 1998.

TABLE 2.6 POPULATION PERCENTAGE DISTRIBUTION BY MARITAL STATUS, SEX AND RURAL/URBAN AREAS, 1998

* referes to a very small number.

The proportion of never married females has drastically increased since 1981 when it was 10.2 per cent. The increasingproportion is an indication of decline in fertility level which was sustaining at very high level for a longer duration.

2.2.4 Female of Reproductive Ages by Marital Status

Of the total females population 43.1 per cent are in reproductive ages i.e. 15-49, as compared to 42.5 per cent of females of reproductive ages registered in 1981.

Approximately 56. per cent were self employed, 23 2 per cent private employees and 5.6 per cent government. Un-paid family helpers were recorded as 12.0 per cent. The difference in proportions of employed population were significant between the genders. The details can be seen in the table given below:

2.6 IMMUNIZATION

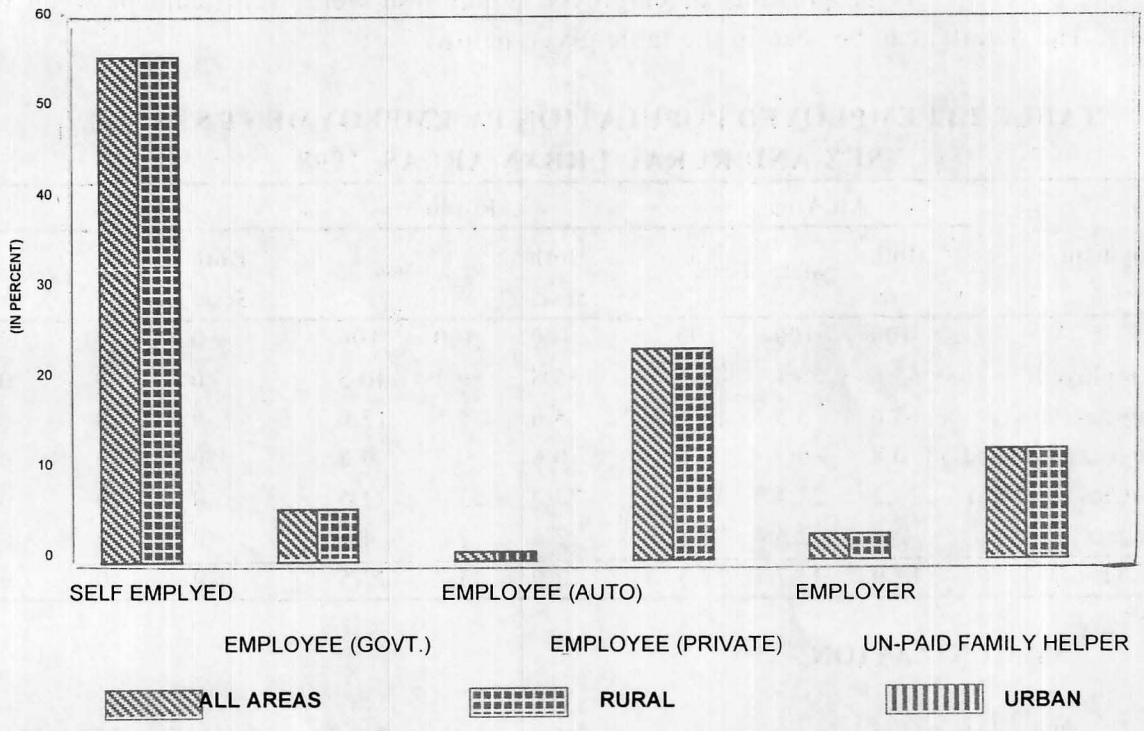

To evaluate vaccination programme the question about immunization of children under 10 years against 6 basic diseases i.e., tuberculosis, diphtheria, pertussis, tetanus, polio and measles was first time enquired through the 1998 Census. As reported in the census about 44 thousands children were vaccinated representing 29.0 per cent of the total children under 10 years, 57.7 had not vaccinated while nothing was known about 13.3 per cent children. A slight better rate of vaccination was observed for male children than female children. For further details data in Table 2.15 can be seen.

2.7 NATIONAL IDENTITY CARD

This question was also asked through the 1998 Census for the first time for evaluating National Registration Scheme introduced in 1973. Of population 18 years and above 60.9 per cent had obtained National Identity Cards and 39.1 had yet to obtain such cards. Male percentage is quite higher as compared to female for obtaining National Identity Card. Their percentage shares were 75.6 and 46.2 per cent respectively. Further details can be seen in the table given below:

2.8 HOMELESS POPULATION

In the entire district there were only 33 persons who had no shelters as reported in the 1998 Census. All these were Muslims with majority never married, 57.6 per cent, 54.5 per cent males and 45.5 per cent females.

PART - III
BROAD ANALYSIS OF HOUSING CENSUS DATA

3. BROAD ANALYSIS OF HOUSING DATA

3.1 LEVEL OF CONGESTION

Level of congestion of housing units is determined in terms of persons per housing unit, or persons per room or rooms per housing unit.

The number of persons per housing unit has increased from 7.0 in 1980 to 8.1 in 1998, implying thereby that houses have been congested with time because of slow tempo of construction and high growth rate of population observed during the last decade or so.

The persons per room has decreased from 4.1 in 1980 to 3.9 in 1998 due to increased number of rooms per housing unit from 1.7 to 2.1 during this period. In term of percentage housing units with one room only it has decreased from 58.8 to 31.0 while housing units with more than one room have increased from 41.2 in 1980 to 69.0 in 1998. The table given below provides comparative data on congestion from last two censuses.

TABLE 3.1 INDICES OF CONGESTION IN 1980 AND 1998

Index	1980	1998
Persons per Housing Unit	7.0	8.1
Persons Per Room	4.1	3.9
Rooms per Housing Unit	1.7	2.1
Housing Units with one Room (Percentage)	58.8	31.0
Housing Units with 2-4 rooms (Percentage)	38.7	64.5
Housing Units with 5 rooms and more (Percentage)	2.5	4.5

3.2 NATURE OF TENURE

Over 82.9 per cent of the housing units are owned, 4.5 per cent rented while remaining 12.6 per cent rent free. The percentage share of owned housing units has increased from 66.9 per cent since 1980 while rented units and rent free have decreased from 13.9 to 4.5 and 19.2 to 12.6 per cent respectively. Table 3.2 gives detailed data on type of tenure with rural urban break up in 1980 and 1998.

TABLE 3.2 NATURE OF TENURE BY RURAL/URBAN AREAS, 1980 AND 1998

Tenure	All Areas		Rural		Urban	
	1980	1998	1980	1998	1980	1998

Rented	13.9	4.5	13.9	4.5	0	0
Rent Free	19.2	12.6	19.2	12.6	0	0

3.3 PERIOD OF CONSTRUCTION

There has been continuous sharp decline in construction of housing units during the last one decade or so. About 71.6 per cent of housing units were constructed atleast 10 years ago, 18.2 per cent during 5 to 10 years before the 1998 Census taking, only 9.9 per cent were constructed during 5 years preceding the census date and hardly 0.3 per cent were constructed during a year before census taking.

3.4 CONSTRUCTION MATERIAL OF OUTER WALLS

Baked bricks, cemented blocks and shaped stones were the main construction material used in construction of outer walls of the buildings. Around 77.3 per cent housing units used such material while unbaked bricks, earth bounded, wood, bamboo and other materials were used by 22.7 per cent of the housing units. Table 3.3 provides detailed data on construction material used in outer walls with urban rural break up during 1998.

Un-baked Bricks/Earth Bounded	14.3	14.3	0
Wood/Bamboo	1.9	1.9	0
Others	6.5	6.5	0

3.5 CONSTRUCTION MATERIAL OF ROOFS

About 80.0 per cent of the housing units used wood/bamboo as construction material in roofs of their buildings, followed by 9.0 per cent housing units used cement or iron sheets and 3.0 per cent used RCC/RCB while remaining have used other construction material.

3.6 SOURCE OF DRINKING WATER

Around 27 per cent of the housing units are using piped water, majority of which has that facility out side of their own houses. About 0.3 per cent are using hand pump for for potable water. Still 2.4 per cent households are using potable water taken out from wells. Table 3.5 provides details about the source of drinking water with rural and urban break up in 1998.

3.7 SOURCE OF LIGHTING

Predominant housing units are using kerosene oil as source of light representing 78.9 per cent of the housing units. Electricity is being used by approximately 15.2 per cent of the housing units while other sources of light like patromax, mustard oil etc. are hardly being used by 5.9 per cent of the housing units. Table 3.6 provides, in detail, percentage of housing units by source of light with urban and rural areas in 1998.

3.8 COOKING FUEL USED

Over 95 per cent of housing units are using wood as cooking fuel in their houses while nearly 1.9 per cent are using kerosene oil for this purpose. Hardly 0.1 per cent are using gas and 2.7 per cent other sources of cooking fuel in their houses. Table 3.7 indicates percentage housing units by source of cooking fuel with urban rural break up in 1998.

3.9 AVAILABILITY OF KITCHEN , BATHROOM AND LATRINE

Separate kitchen, bathroom and latrine are available in 23.5, 37.1 and 11.1 per cent of the housing units respectively. Shared kitchen, bathroom and latrine facilities are available in 5.9, 7.9 and 2.5 per cent of the housing units while remaining have no kitchen, bathroom and latrine facilities in their housing units. Table 3.8 gives details on availability of kitchen, bathroom and latrine facilities in housing units by urban and rural residence, 1998.

3.10 SOURCE OF INFORMATION

The question on source of information was asked for the first time in the 1998 Census. There were only three main sources of information enquired through the census. These were watching of T.V., listening to radio and reading of newspapers. Approximately 36 per cent of the households have access to television, radio or newspapers for keeping themselves informed about day to day happenings around them. Over all 96.3 per cent of the households are listening to radio, 8.1 per cent watching T.V and 13.3 per cent reading newspapers in the district. Table 3.9 provides further details on percentage households by source of information at rural and urban residence in 1998.
