

## **APPENDIX A: SAMPLE DESIGN FOR PAKISTAN SOCIAL AND LIVING STANDARDS MEASUREMENT SURVEY DISTRICT LEVEL, 2008-09**

### **Objectives:**

The data generated through PSLM Survey will be used to assist the government in formulating the poverty reduction strategy as well as development plans at district level. The indicators will be developed at district level in the following sectors.

1. Education
2. Health
3. Water Supply & Sanitation.
4. Household Assets/Amenities.
5. Satisfaction to Service Delivery.

### **Universe:**

The universe of this survey consists of all urban and rural areas of all four provinces, from the scope of the survey.

### **SAMPLING FRAME**

#### **Urban area:**

FBS has developed its own urban area frame. All urban areas comprising cities/towns have been divided into small compact areas known as enumeration blocks (E.Bs) identifiable through map. Each enumeration block comprises about 200-250 households and categorized into low, middle and high-income group, keeping in view the socio economic status of the majority of households. Urban area sampling frame consists of 26698 enumeration blocks has been updated in 2003.

#### **Rural area:**

With regard to the rural areas, the lists of villages/mouzas/dehs according to Population Census, 1998 have been used as sampling frame. In this frame, each village/mouza/deh is identifiable by its Name, Had Bast Number, Cadastral map etc. This frame is comprised 50590 villages/mouzas

The numbers of enumeration blocks in urban and mouzas/dehs/villages in rural areas of the country are as under:

**NO. OF ENUMERATION BLOCKS AND VILLAGES AS PER SAMPLING FRAME**

<b>Province</b>	<b>Number of E. Blocks</b>	<b>Number of Villages</b>
Punjab	14,549	25,875
Sindh	9,025	5,871
NWFP	1,913	7,337
Balochistan	613	6,557
A.J.K	210	1,654
Northern Area	64	566
FATA		2,596
Islamabad	324	132
<b>Total</b>	<b>26,698</b>	<b>50,588</b>

**STRATIFICATION PLAN****Urban Areas:**

Within each district large sized cities having population five lacs and above have been treated as independent stratum. Each of these cities has further been sub-stratified into low, middle and high group's areas. The remaining cities/towns within each district have been grouped together to constitute an independent stratum.

**Rural Areas:**

The entire rural domain of a district for Punjab, Sindh, NWFP and Balochistan provinces has been considered as independent stratum.

**Sample Size and its Allocation:**

To determine optimum sample size for this survey, analytical studies based on the results of Pakistan Demographic Survey, Labour Force and Pakistan Integrated Households Sample Survey were undertaken. Keeping in view the variability exist within the population for the characteristics for which estimates are to be prepared, population distribution, level of estimates and field resources available a sample size of 75188 households enumerated from 5298 sample PSUs (2248 from urban and 3050 from rural areas) has been considered sufficient to produce reliable estimates at district level in respect of all provinces. An Annexure-I showing sample sizes by districts in four provinces of Pakistan, is attached.

**Sample Design:** A two-stage stratified sample design has been adopted for this survey.

**Selection of primary sampling Units (PSUs):**

Enumeration blocks in the urban domain and mouzas/dehs/villages in rural domain have been taken as primary sampling units (PSUs). In urban domain sample PSUs from each stratum have been selected by probability proportional to size (PPS)

method of sampling scheme using households in each block as measure of size (MOS). Similarly in rural areas, population of each village has taken as MOS for selection of sample villages using probability proportional to size method of selection.

**Selection of Secondary Sampling Units (SSUs):**

Households within each sample Primary Sampling Unit (PSU) have been considered as Secondary Sampling Units (SSUs). 16 and 12 households have been selected from each sample village and enumeration block respectively by systematic sampling scheme with a random start.

**Estimation Procedures:**

Detail of estimation procedures for estimates and their variances is attached as Annexure – II.

## District-Wise Distribution of Sample Areas and Household – PSLM 2008-09

S.No	Districts		Sample Areas			Sample Households

## Estimation Procedure:

### ESTIMATION PROCEDURE ADOPTED FOR PSLM SURVEY

#### NOTATIONS:

$N_h$  = Total number of Primary Sampling Units (PSUs) in the  $h$ th stratum of a province.

$n_h$  = Total number of sample PSUs in the  $h$ th stratum of a province.

$M_{hi}$  = Total number of Secondary Sampling Units (SSUs) in the  $i$ th sample PSU of  $h$ th stratum of a province.

$m_{hi}$  = Number of sample SSUs in the  $i$ th sample PSU of  $h$ th stratum of a province.

$P_{hi}$  = Assigned probability of selection of  $i$ th PSU of the  $h$ th stratum of a province.

$y_{hij}$  = Value of any characteristic  $y$  of  $j$ th SSU within  $i$ th PSU of  $h$ th stratum of a province.

$x_{hij}$  = Value of any characteristic  $x$  of  $j$ th SSU within  $i$ th PSU of  $h$ th stratum of a province with whose respect proportion is required.

#### (i): ESTIMATION FORMULAE FOR TOTALS AND THEIR VARIANCES

$$N = \sum_{h=1}^L N_h$$

$$n = \sum_{h=1}^L n_h$$

$$\bar{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}}$$

OR

$$\bar{Y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{P_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij}$$

$$\bar{Y} = \sum_{h=1}^L \bar{Y}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}}$$

For  $X$ , another variable of interest, we have

$$\bar{X}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{P_{hi}} = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{P_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} x_{hij}$$

$$\bar{X} = \sum_{h=1}^L \bar{X}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{P_{hi}}$$

$$\bar{R} = \frac{\bar{Y}}{\bar{X}}$$

$$v(\bar{y}_h) = \frac{1}{n_h} s_{ht}^2 = \frac{1}{n_h(n_h - 1)} \left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}} \right)^2}{n_h} \right)$$

$$v(\bar{Y}) = \sum_{h=1}^L \frac{1}{n_h} s_{ht}^2 = \sum_{h=1}^L \frac{1}{n_h(n_h - 1)} \left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}} \right)^2}{n_h} \right)$$

(ii): FORMULA FOR RATIO ESTIMATES

$$r = \frac{\bar{Y}}{\bar{X}}$$

where  $\bar{Y}$  and  $\bar{X}$  can be estimated by equations under item (i) given above.

$$Rel V(r) = \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} s_{hb}^2 + \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M_{hi}^2}{p_{hi}^2 m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s_{hw}^2$$

where

$$s_{hb}^2 = s_{ht}^2 - s_{hw}^2$$

$$s_{ht}^2 = s_{hy}^2 + r^2 s_{hx}^2 - 2r s_{hxy}$$

$$s_{hx}^2 = \frac{1}{(n_h - 1)} \left[ \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}^2}{p_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{p_{hi}} \right)^2}{n_h} \right]$$

$$s^2_{hy} = \frac{1}{(n_h - 1)} \left[ \sum_{i=1}^{n_h} \frac{\bar{y}_{hi}^2}{p_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \bar{y}_{hi} \right)^2}{n_h} \right]$$

$$s_{hxy} = \frac{1}{n_h - 1} \left[ \sum_{i=1}^{n_h} \left( \frac{\bar{x}_{hi}}{p_{hi}} \frac{\bar{y}_{hi}}{p_{hi}} \right) - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{x}_{hi}}{p_{hi}} \right) \left( \sum_{i=1}^{n_h} \frac{\bar{y}_{hi}}{p_{hi}} \right)}{n_h} \right]$$

$$s^2_{hw} = \frac{1}{n_h - 1} \sum_{i=1}^{n_h} \frac{1}{p_{hi}^2} \frac{M_{hi}^2 (M_{hi} - m_{hi})}{m_{hi} M_{hi}} s^2_{hi}$$

and

$$s^2_{hi} = s^2_{hiy} + r^2 s^2_{hix} - 2r s_{hixy}$$

$$s^2_{hiy} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} y_{hij}^2 - \frac{\left( \sum_{j=1}^{m_{hi}} y_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hix} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} x_{hij}^2 - \frac{\left( \sum_{j=1}^{m_{hi}} x_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hixy} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} x_{hij} y_{hij} - \frac{\left( \sum_{j=1}^{m_{hi}} x_{hij} \sum_{j=1}^{m_{hi}} y_{hij} \right)}{m_{hi}} \right]$$

## **2. EDUCATION**

### **2.1 Introduction**

One of the main objectives of the MDGs is the improvement in the percentage of literate population. Unfortunately literacy rates in Pakistan are very low when compared to other SAARC countries. The primary objective of Government policy in the last few years has been to improve the level and quality of education in Pakistan. In this regard great stress has been put on the primary level education because it forms the core of the literate population. Literacy and primary school enrolment rates in Pakistan have shown improvement during last five years but they are still low when compared to the countries of the region. The problem lies with the basic infrastructure and the simultaneously multiple systems of education that prove to be a stumbling block in imparting quality education. Scarcity of resources and the provision of adequate facilities and training are retarding the proper growth of educational system in Pakistan. The PRSP strategy for the sector includes improving the functioning & utilisation of existing schools, improving the quality of education, increasing enrolment, improving access to education and expanding the primary education system.

This chapter will cover key indicators on school attendance, enrolment rates and literacy.

### **2.2 School attendance**

The population of ten years and older that have ever attended schools is 59 percent in 2008-09 as compared to 57 percent in 2006-07 (Table 2.1). This proportion is much higher in urban areas than in rural areas and much higher in men than in women. Punjab and Sindh have the highest proportions that have ever attended school. Islamabad (86 percent), Lahore (81 percent) in Punjab, Karachi (80 percent) in Sindh, Abbotabad (74 percent) in Khyber Pakhtunkhwa and Ziarat (69 percent) in Balochistan are the top districts in this regard. On the other hand, the districts at the bottom are Rajanpur (26 percent) in Punjab, Jaccobabad (40 percent) in Sindh, Kohistan (31 percent) in Khyber Pakhtunkhwa, and Kohlu (9 percent) in Balochistan. Kohlu has the lowest ratio of the population having ever attended school not just in Balochistan but the entire country. Whereas Islamabad (86 percent) has the highest value in the country. As far as gender based differences are concerned, the greatest disparity is found in Khyber Pakhtunkhwa and Balochistan where Hangu (77 percent male and 18 percent female) and Kalat (64 percent male and 13 percent female), respectively have larger differences between male and female population having ever attended school. However, the lowest female enrolment is in Kohistan (4 percent) in Khyber Pakhtunkhwa and Kohlu and Dera Bugti (2 percent each) in Balochistan.

49 percent of the population 10 years and over in 2008-09 has completed primary or higher level education, as compared to 46 percent in 2006-07 (Table 2.2). Islamabad with 78 percent, Lahore with 72 percent in Punjab, Karachi with 71 percent in Sindh, Abbotabad with 64 percent in Khyber Pakhtunkhwa and Ziarat with 59 percent in

Balochistan is the best performing districts. Whereas Rajanpur with 18 percent in Punjab, Thatta with 29 percent in Sindh, Kohistan with 15 percent in Khyber Pakhtunkhwa and Kohlu with 6 percent in Balochistan are the worst performing districts. Islamabad (78 percent) surpasses all other districts in Pakistan whereas once again Kohlu (6 percent) falls behind all other districts. Here again the widest gender differences are observed in Hangu district (58 percent male and 12 percent female) in Khyber Pakhtunkhwa and Awaran and Zhob (50 percent male and 9 percent female each) in Balochistan. Again the lowest female population that has ever attended school is found to be in Kohistan (1 percent) in Khyber Pakhtunkhwa, and Kohlu and Dera Bugti (1 percent each) in Balochistan.

### **2.3 Primary Enrolment Rates (GER)**

The GER, sometimes referred to as the participation rate, is the number of children attending primary schools divided by the number of children who ought to be attending. The GERs are presented in this report in two different ways: excluding and including the katchi class and for different age groups.

Table 2.3(a) shows the gross primary level enrolment rates at National/ Provincial/ District levels excluding katchi for the age group 5-9 years and Table 2.3 (b) for age 6-10 years. The GER at National level during 2008-09 remains stable at 91 percent. In provinces, Sindh (from 79 percent to 84 percent), Khyber Pakhtunkhwa (from 82 percent to 87 percent) and Balochistan (from 72 percent to 75 percent) have shown noticeable boost in 2008-09 as compared to 2006-07, (Table 2.3 a). However, Punjab shows decrease from 100 percent in 2006-07 to 97 percent in 2008-09. Jehlum with 130 percent, Karachi with 115 percent, Haripur district with 116 percent and Ziarat district with 124 percent are the peak districts whereas Rajanpur with 63 percent, Shahdadtot with 58 percent, Tank district with 65 and Kohlu & Dera Bugti district with 30 percent each are at the bottom in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively. In Balochistan Province some of the districts like Mastung (65 percent), and Ketch (88 percent) have reported Primary GER at considerable lower side in 2008-09 as compared to 2006-07. While observing gender differences a huge gap was found in male and female GER in Kohistan district (131 percent male and 21 percent female) in Khyber Pakhtunkhwa. Similar difference was also prevalent in the district Qilla Saifullah (114 percent male and 37 percent female) in Balochistan. Kohlu and Dera Bugti have the lowest GER (30 percent) in the country and Jehlum (130 percent) has the highest GER.

The gross enrolment rate at National Level is 90 percent when katchi is included and the age group is expanded to 4-9 year olds (Table 2.4). The pattern within districts in the provinces is more or less similar to GERs when Katchi class is excluded.

The PSLM 2008-09 collected information on enrolment in all types of schools including the private and government sectors. Table 2.5 shows the gross enrolment rate in government primary schools. It is calculated as the number of children enrolled in government primary schools divided by the number of children of primary school age. One of the main strategies of the Government of Pakistan is to expand public provision of

primary education and this measure can be used to assess whether government schools have increased their coverage of the population, by increasing enrolments faster than the growth in population. Layyah district with 100 percent enrolment in government schools is at the top in Punjab and in overall Pakistan also. Whereas, Lahore with 37 percent is at the bottom. In Sindh, Tharparker with 85 percent and Karachi with 37 percent are at the highest and lowest ranks. Batagram with 89 percent and Peshawar with 51 percent in Khyber Pakhtunkhwa are at the top and bottom, respectively. In Balochistan, Ziarat 98 percent and Dera Bugti 29 percent are at the peak and bottom, respectively. Here an interesting fact is observed that apart from Islamabad, which has a rich facility of Government schools and colleges, the general trend in all other big cities is the preferences of private educational facilities over those provided by the government. The absence of alternatives make government schools a priority in small cities.

The NER at primary level refers to the number of students enrolled in primary schools of primary school age divided by the number of children in the age group for that level of education. In other words, for Pakistan, the official primary NER is the number of children aged 5 to 9 years attending primary level divided by the number of children aged 5 to 9 years.

The NER for Pakistan as a whole in 2008-09 is 57 per cent (Table 2.6 a) as compared to 56 percent in 2006-07. Comparing NERs for districts within the provinces, it is revealed that Chakwal with 82 percent, Karachi with 66 percent, Haripur with 71 percent and Gwadar with 65 percent are at the zenith, whereas Bahawalpur with 41 percent, Jamshoro with 33 percent, Swat with 36 and Kohlu 6 percent are in the abyss in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively. Chakwal with 82 percent in Punjab is the best performing district and Kohlu with 6 percent in Balochistan is the worst for overall Primary NER. Generally girls have a lower enrolment rate than boys and the difference is markedly larger in rural areas than in urban areas.

Table 2.8 shows the NER for government primary schools. This is the number of children aged 5-9 years enrolled in government primary schools divided by the total number of children aged 5-9. Like the gross enrolment rate for government schools, it measures the extent to which publicly provided education is reaching its target group. However, this measure excludes overage children who are enrolled in primary schools. The NER for Government primary schools within districts follows a similar pattern as observed for NERs for the entire primary enrolment.

The percentage of primary school students who are enrolled in government schools is shown in Table 2.9 (a). The government share of primary enrolment is 70 per cent in 2008-09 as compared to 69 percent in 2006-07. The district wise comparison among districts within the provinces reveals, districts of Bhakhar with 91 percent and Lahore with 34 percent are at the best and worst performing districts correspondingly. In Sindh, Tharparkar with 99 percent and Karachi with 32 percent government primary enrolment are at the highest and lowest ranks, respectively. In Khyber Pakhtunkhwa, districts of Upper Dir 96 percent and Peshawar 57 percent are at the top and bottom in that order. In Balochistan, Kohlu, Kalat, Awaran, Washuk and Musa Khel districts with

100 percent government enrolment are at the top whereas Quetta with 76 percent is at the bottom. The above analysis reflects that developed districts have larger share of private education whereas less developed districts mostly depend on government educational facilities.

## **2.4 Middle and Matric Enrolment Rates**

Gross and net enrolment rates for the middle level with age group 10-12 years old are presented in Tables 2.10(a) and 2.11(a). The gross enrolment rate for the middle level, for Pakistan as a whole, is 53 percent as compared to 51 percent in 2006-07. The middle level enrolment in urban areas stands at 71 percent (69 percent in 2006-07) as compared to 46 percent (43 percent in 2006-07) in rural areas. Islamabad (Federal Capital) with 103 percent for middle class is at the top in Pakistan. Rajanpur with 17 percent is at the bottom in Punjab. In the other three provinces Karachi with 69 percent, Abbotabad district with 100 percent and, Ziarat with 74 percent are the best performing districts while Thatta with 25 percent, Kohistan with 25 percent and Dera Bhugti with 6 percent are the worst performing districts in Sindh, Khyber Pakhtunkhwa and Balochistan. Gender based differences are more prevalent in Ketch (male 68 percent, female 17 percent) in Balochistan and in Charsada district of Khyber Pakhtunkhwa (86 percent male and 27 percent female). Once again the lowest female GER at middle level is in Kohistan district (1 percent) of Khyber Pakhtunkhwa and Dera Bugti (0 percent) in Balochistan. Tables 2.10(b) and 2.11(b) have been added for GER & NER, respectively for middle level by changing age group from 10-12 to 11-13 for reader's information.

Net enrolment rates at the middle level are much lower than gross enrolment rates (Table 2.11a). This is due to the large number of overage, children that are enrolled in these classes. The district level comparison within the provinces depicts that more or less NERs have the same patterns which are observed for GERs. Chakwal with 37 percent is at top in among all districts. Kohlu with no enrolments is at the bottom in the entire country showing that it is an area that needs special attention.

At matric level, gross enrolment stands at 54 per cent as compared to 48 percent in 2006-07 and net enrolment rate is at 12 per cent (Tables 2.12 a and 2.13a). Chakwal (102 percent) has the highest and Kohlu (4 percent) has the lowest performance in the entire country. Chakwal with 102 percent, Karachi with 76 percent, Abbotabad with 88 percent and Ziarat with 80 percent are at the peak. However, Rajanpur with 22 percent, Tandu Muhammad Khan with 18 percent, Kohistan with 10 percent and Kohlu with 4 percent are at the lowest level in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan. Khyber Pakhtunkhwa has the greatest gender based disparity in Lakki Marwat (122 males and 18 female) and Balochistan in Zhob (103 for males and 30 for female). One striking feature is that female GER has the worst situation for matric level enrolment especially in Balochistan where in four districts there is no female enrolment i.e Musa Khel, Jhal Magsi, Kohlu and Dera Bugti. More or less same pattern is observed for NERs among

districts within provinces. Tables 2.12(b) and 2.13(b) have been added for GER & NER, respectively, for matric level by changing age group from 13-14 to 14-15 for readers' information.

## **2.5 Literacy**

Literacy is an important indicator of education because its improvement is likely to have an impact, in the longer run, on other important indicators of welfare. The literacy rate for population 10 years and above is 57 percent during 2008-09, as compared to 55 percent in 2006-07 (Table 2.14 a). Literacy remains much higher in urban areas than in rural areas and much higher in men than in women. Islamabad with 84 percent leads all districts in terms of literacy and Kohlu with 9 percent lags behind all districts in terms of literate population 10 years and older. Islamabad (Federal Capital) fares well with 84 percent 10 years and older literate population. Rawalpindi with 79 percent is at the top whereas Rajanpur district with 27 percent is at the lowest rank in Punjab. In Sindh, Karachi with 78 percent and Jaccobabad & Tharparkar with 39 percent are at the highest and lowest of ranks, respectively. Abbotabad with 72 percent and Kohistan with 30 percent are ranked top and bottom districts in Khyber Pakhtunkhwa. In Balochistan province, Ziarat 71 percent and Kohlu 9 percent are at the peak and bottom. Kohlu and Dera Bugti in Balochistan (2 percent) and Kohistan in Khyber Pakhtunkhwa (3 percent) exhibit the lowest female literate population in the entire country. Adult literacy rate for the population aged 15 and above was 54 percent in 2008-09 as compared to 52 percent in 2006-07 (table 2.14b). The pattern among districts within the provinces is similar to the Literacy Rate of population 10 years and above.

## EXECUTIVE SUMMARY

This report presents district level findings in continuation of the report on the National/Provincial of the fifth round of the Pakistan Social and Living Standards Measurement (PSLM) Survey 2008-09. In this survey, 75188 households were covered in the entire country and information was collected from households on a range of social sector issues. These are primarily focussed on the sectors covered under Poverty Reduction Strategy Paper (PRSP) i.e. Education, Health, Household Assets/ Amenities, Immunisation, Pre/Post Natal care of females and Household satisfaction by facilities and services in the overall context of Millennium Development Goals (MDGs).

Indicators between different groups are presented disaggregated by province/district, by region (urban-rural) and by gender. The indicators given in the report have been compared with the previous reports of PSLM surveys, wherever possible.

### Education

The Gross Enrolment Rate (GER) for primary schools (Age 5-9) during 2008-09 remained stagnant at 91 percent. Jehlum district with 130 percent and Kohlu and Dera Bugti with 30 percent have the highest and lowest GER in the country. The Net Enrolment Rate (NER) was increased from 56 percent in 2006-07 to 57 percent in 2008-09. It however remained substantially lower than the Gross Enrolment Rate because of the enrolment of overage children in primary schools. Chakwal with 82 percent and Kohlu with 6 percent only has been ranked at the top and bottom for primary level NER. The PSLM survey collects information on enrolment in all types of schools i.e. public and private. The PSLM round shows increase in the share of primary enrolments that are in government schools. The overall share has increased from 69 percent in 2006-07 to 70 percent in 2008-09. This trend is more significant in some of the districts such as Bhakkar (Punjab), Tharparkar (Sindh), Upper Dir (Khyber Pakhtunkhwa) and Musa Khel (Balochistan) which have shown over 90 percent government enrolment.

The GER (Age 10-12) for middle level has increased from 51 percent in 2006-07 to 53 percent in 2008-09 and the NER has increased from 18 percent in 2006-07 to 20 percent in 2008-09 at national level. Islamabad with 103 percent and Dera Bugti with 6 percent have highest and lowest GER for Middle class. However, NER which gives more realistic picture shows that Abbotabad with 39 percent and Kohlu with 0 percent are ranked at the top and the bottom among all districts.

The Matric Level (Age 13-14) GER has increased from 48 percent in 2006-07 to 54 percent in 2008-09 and NER has increased from 10 percent (2006-07) to 12 percent (2008-09). The real impact of increase in GER and NER at matric level will be observable after four/five years when the existing primary level cohort reaches at Matric Level. The districts of Chakwal with 102 percent and Kohlu with 4 percent only are at the top and the bottom respectively in overall Pakistan for Matric level GER. In Balochistan the NER at matric level is less than 10 percent except Ziarat (32 percent).

The literacy level of population (10 years & above) has shown improvement. This has risen from 55 percent in 2006-07 to 57 percent in 2008-09. This increase has taken place for both men and women and across all provinces. Adult literacy (15 years & above) has also increased from 52 percent in 2006-07 to 54 percent in 2008-09. Adult literacy is highest in Islamabad (83 percent) and lowest in Kohlu (7 percent) in overall Pakistan.

## **Health**

Two measures of immunisation coverage are presented in PSLM report. Based on mother's recall, at least one immunisation to the child has increased from 86 percent in 2006-07 to 97 percent in 2008-09. The measure that includes mother's recall as well as record of immunisations given to the child shows a rise from 76 percent in 2006-07 to 78 percent in 2008-09 in the proportion of one year old that are fully immunised. Nankana Sahib with 100 percent, Kashmore with 93 percent, and Malakand with 93 percent, and Ziarat with 76 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively.

There has been a decrease in the proportion of children under five suffering from diarrhoea i.e. from 11 percent in 2006-07 to 10 percent in 2008-09. Sindh has shown no change during 2008-09 and remained stable at 12 percent. Vehari with 22 percent in Punjab, Sanghar with 23 percent in Sindh, Batagram with 27 percent in Khyber Pakhtunkhwa and Chaghi with 22 percent in Balochistan are the most affected districts within each province.

Pre Natal consultation for pregnant females during their last pregnancy has increased from 53 percent in 2006-07 to 58 percent in 2008-09. Pre-Natal consultations were much more common in urban than in rural areas however, rural areas has also shown considerable improvement. Islamabad 97 percent, Karachi 96 percent, Haripur 90 percent and Lasbilla 67 percent are at the top ranks within the provinces. The frequency of post-natal consultations has increased from 24 percent in 2006-07 to 25 percent in 2008-09. It is noticed that there is a big gap between pre-natal and post-natal consultation.

68 percent of pregnant women received Tetanus Toxoid injection in 2008-09 as compared to 56 percent in 2006-07. Islamabad with 97 percent, Gujrat with 96 percent in Punjab, Karachi with 91 percent in Sindh, Mardan with 91 percent in Khyber Pakhtunkhwa and Ketch with 57 percent in Balochistan are at top ranks within the provinces.

## **Housing, Water Supply & Sanitation**

The housing units by tenure reveal that 87 percent of households are living in their own dwelling units in 2008-09 as compared to 86 percent in 2006-07, while 6 percent of households have rented dwelling units and about 6 percent have rent free units and only 1 percent households live in subsidized housing units. Islamabad (Federal

Capital) has the highest percentage of households living in rented or subsidized rented units as compared to other districts. In PSLM 2008-09, the comparison of housing units by number of rooms with the 2006-07 indicate that housing units with one room have decreased from 24 percent in 2006-07 to 23 percent in 2008-09, housing units with 2-4 rooms have increased from 69 percent in 2006-07 to 71 percent in 2008-09, although houses with more than five rooms have marginally decreased from 6.62 percent in 2006-07 to 6.50 percent in 2008-09. The housing units using electricity (as fuel for lighting) have increased from 87 percent in 2006-07 to 91 percent in 2008-09. District Tank has the highest (100 percent) and Kohlu (26 percent) has the lowest percentage of households using electricity for lighting. Use of Gas as fuel for cooking has increased from 30 percent to 31 percent in 2008-09. Karachi and Quetta are at top among districts in using gas as main fuel for cooking with 95 and 91 percent usage, respectively.

The vast majority of the rural population of Punjab are using hand pump or water from a motor pump as main source of drinking water and only 5 percent of the rural population depends on a dug well or other sources (river, canal or stream). The supply of tap water for urban areas in Balochistan is 85 percent, which is highest among all the provinces.. In Khyber Pakhtunkhwa and Balochistan 32 and 69 percent of the rural population, respectively, depend on water from a dug well or from a river/canal/stream as main source of drinking water. Karachi with 92 percent and Barakhan and Musa Khel with 1 percent has highest and lowest percentage of tap water facility among various districts.

In rural areas of Pakistan, access to flush toilets has increased from 41 percent in 2006-07 to 47 percent in 2008-09 however, non-flush remains constant at 21 percent in 2008-09. Households with no toilet in rural areas have declined from 39 percent in 2006-07 to 33 percent in 2008-09. The top ranked districts within the provinces having flush toilet facility are Lahore (96 percent), Karachi (98 percent), Peshawar (90 percent), and Quetta (88 percent).

### **Household Perception of Economic Situation and Satisfaction by Facilities and Services**

Households were asked to compare their economic situation with last year. In response to this question 44.44 percent in 2008-09 reported no change (51.52 percent in 2006-07), 33.09 percent reported worse or much worse (21.35 percent in 2006-07) and 22.24 percent reported better or much better (26.99 percent in 2006-07). However, when asked to compare the economic situation of the community where they live, 54.08 percent in 2008-09 reported the same (59.24 percent in 2006-07), 19.34 percent reported worse or much worse (10.27 percent in 2006-07) and 21.04 percent reported better or much better (25.93 percent in 2006-07).

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government. In response to this question, 40 percent in 2008-09 reported satisfaction with Govt Basic Health Facilities (35 percent in 2006-07), 15 percent satisfied with the Family Planning Services (12 percent in 2006-07), 63 percent with Schools (61 percent in 2006-07), 15 percent with Veterinary Services pre-

dominantly rural (14 percent in 2006-07), 15 percent with Agriculture Extension all rural (14 percent in 2006-07) and 10 percent with police (7 percent in 2006-07).

## **List of Officers Involved In PSLM Survey 2008-09**

The PSLM report is produced by the efforts of the following officers of Federal Bureau of Statistics listed under the specific tasks:

### **PLANNING, EXECUTION OF SURVEY AND FINALIZATION OF REPORT: -**

§ Mr. Muhammad Ishaq Rana	Deputy Director General
§ Mr. Ayazuddin	Director / Project Director
§ Ms. Rabia Awan	Chief Statistical Officer
§ Mr. Liaquat Ali	Chief Statistical Officer
§ Mr. Saqib Sultan Khawar	Statistical Officer

### **Management Team:-**

§ Rana Muhammad Ismail	Statistical Officer
§ Shafqat Hussain	Statistical Officer
§ Ms. Safia Begum	Statistical Officer

### **Assisted By:**

§ Mr. Sharifullah	Statistical Officer
§ Mr. Sajid Akhtar Lodhi	Statistical Officer
§ Ms. Aisha Burki	Statistical Officer
§ Ms. Hina Kanwal	Statistical Officer
§ Ms. Saba Sattar	Internee
§ Ms. Madiha Amjad	Internee

### **DATA PROCESSING:-**

§ Mr. Ijaz Hussain	Director
§ Mr. Mumtaz Uddin Shaikh	Chief System Analyst
§ Mr. Muhammad Javaid Rana	Chief System Analyst
§ Mr. Azizullah Bhatti	Data Processing Officer
§ Mr. Mudasir Akhtar	Data Processing Assistant

### **SAMPLE DESIGN: -**

§ Mr. Muhammad Ramzan Khan	Director
----------------------------	----------

### **FIELD OPERATIONS: -**

§ Mr. K.B Shakir	Director
------------------	----------

## **3. HEALTH**

### **3.1 Introduction**

The Government health strategy focuses on young, children and their mothers, particularly in rural areas. One of the most pressing needs addressed by government is to improve women's access to government health care. The government's strategy for primary health includes:

- Improving the efficiency and utilization of basic health care services, both preventive and curative.
- Improving programme designed by paying more attention to quality.
- Increasing access to health care by constructing more facilities.
- Increasing women's access by recruiting more female staff.

In this chapter, information is presented on a number of key indicators that include percentage of population who got sick or injured, type of health consultation, immunization, diarrhea and pre-and post-natal care.

### **3.2 Sick or injured**

. During the reference period of two weeks prior to the date of interview 6.32 percent of the population in 2008-09 reported sick or injured as compared to 6.27 percent in 2006-07. Punjab and Sindh with 6.25 percent and 7.17 percent respectively have comparatively higher prevalence of sick or injured population as compared to Khyber Paktunkhwa and Balochistan. Prevalence of sickness / injuries is lower in most of the districts in the Balochistan as compared to other provinces. T.T Singh district in Punjab with 9.36 percent , Thatta district in Sindh with 12.58 percent , D.I Khan district in Khyber Pakhtunkhwa with 10.04 percent, Lasbilla district in Balochistan with 11.84 percent prevalence of sick/injured population are at the top (Table 3.1). About 95.79 percent of reported as sick or injured had some type of health consultation. Over 71.23 percent (64 percent in 2006-07) of sick or injured persons consulted private hospitals or doctors compared to 20.36 percent (20.64 percent in 2006-07) who visited public hospitals/ dispensaries/ RHCs /BHUs for their treatment (Table 3.3). Apart from a few districts of Khyber Pakhtunkhwa and Balochistan which prefer public dispensary/hospital over private dispensary/hospital, the general trend is that private facilities are considered more reliable by people than public dispensary/hospital.

### **3.3 Immunization**

One of the primary objectives of the Government in health sector is to expand the coverage of immunization. Measuring immunization coverage in household surveys is not easy. Parents often do not have the children's immunization / health cards with full information on vaccinations received. Immunization rates based only on the information

given on immunization cards ('record') may therefore, underestimate coverage. However, it has the benefit of using written information recorded by health workers.<sup>1</sup> The alternative is to ask parents about their child's vaccination history, and calculate coverage rates using this information ('recall'). This runs the risk that parents will not remember vaccinations and will confuse different types of vaccines or will confuse other injections with vaccinations. Neither measure is ideal; both are presented in this report to help make an informed judgment on trends. In this report, both of these measures use all children of the appropriate age range in the denominator.

According to the WHO guidelines, a child should receive a BCG vaccination to protect against tuberculosis, three doses of DPT to protect against diphtheria, pertussis, and tetanus, three doses of polio vaccine, and a measles vaccination. Table 3.4 presents immunisation rates for children aged 12-23 months, who have been immunised during the period 12 to 24 months prior to the survey. Overall, when recall and record measures are included, full immunisation rates (all the 8 recommended vaccines) showed a positive increase from 76 percent in 2006-07 to 78 percent in 2008-09. For fully immunized based on recall and record, Nankana Sahib with 100 percent, Kashmore 93 percent, Malakand 93 percent, and Ziarat 76 percent are top ranked districts while D.G.khan with 55 percent Tharparkar with 33 percent, Lakki Marwat with 33 percent, Awaran with 0 percent are at the bottom in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces, respectively.

Using the measure that includes recall & record, there is an increase in full immunization rates for urban areas, but in rural areas there is minor increase from 73 percent in 2006-07 to 74 percent in 2008-09. When considering the record based measure immunization rates, there is decline in urban areas from 63 percent in 2006-07 to 60 percent in 2008-09, whereas there is slight increase of one percent in rural areas i.e. from 45 percent in 2006-07 to 46 percent in 2008-09.

Coverage by antigen is given in Tables 3.5 and 3.6. The former is based on record, the later on record plus recall. Both measures have shown general improvement in the coverage of all antigens as compared with 2006-07.

### **3.4 Diarrhea**

Dehydration caused by diarrhea is a major cause of mortality among children. Childhood diarrhea has been a serious health problem in Pakistan. Both its prevention, through improved water and sanitation, and the treatment of dehydration through oral rehydration salts (ORS) are goals of government. Home management of diarrhea through oral rehydration salts (ORS) or a recommended home fluid (RHF) - can prevent many of these deaths. Preventing dehydration by increasing fluid intake is important strategy for managing diarrhea.

---

<sup>1</sup> Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

The households were asked to report whether a child had diarrhea in the 30 days prior to the survey. If so, a series of questions were asked whether they have consulted someone for it or not and whether ORS has been given to child or not.

Overall percentage of children who have suffered from diarrhea in the 30 days prior to survey decreased from 11 per cent in 2006-07 to 10 percent in 2008-09. Khyber Pakhtunkhwa has shown increase in diarrhea cases while Punjab and Balochistan have shown decrease. Vehari with 16 percent, Sanghar with 23 percent, Batagram with 27 percent and Chaghi with 22 percent are the most affected districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively (Table 3.7).

In 94 per cent of diarrhea cases a practitioner of some kind was consulted. The pattern of practitioner consultation in all districts of Punjab (except Vehari with 76 percent and Gujarat with 70 percent), Sindh (except Tando Allah Yar with 76 percent) and Khyber Pakhtunkhwa (except Abbottbad with 60 percent) is the same. However, Balochistan province shows a mixed pattern with the exception of Awaran district where no child has suffered from diarrhea, therefore, the consultation rate for diarrhea is 0 percent (Table 3.8). The use of ORS in diarrhea cases has increased to 79 percent in 2008-09 from 76 percent in 2006-07. ORS is most likely to be used in Sindh, Khyber Pakhtunkhwa and Balochistan, whereas its use is lowest in Punjab. Use of ORS in case of diarrhea is usually more prevalent in urban areas than rural areas. The pattern within the districts is more or less the same, which has been observed at provincial levels.

In cases of diarrhea, the most likely type of practitioner to be consulted continues to be a private practitioner (73 percent in 2008-09 as compared to 72 percent in 2006-07) (Table 3.9). Basic health units (BHU) and rural health centers (RHC) were consulted by only 4 percent of cases in Pakistan, which gives some indication of the very limited use of the government primary health network for these kinds of curative services. However, in Balochistan 44 percent diarrhea cases were consulted by government facilities and in most of the districts, government facilities such as hospitals, dispensaries and BHUs were consulted.

### **3.5 Pre-and post-natal care**

Quality prenatal care can contribute to the prevention of maternal mortality by detecting and managing potential complications and risk factors, including pre-eclampsia, anaemia, and sexually transmitted diseases. Pre-natal care also provides opportunities for women to learn the danger signs of pregnancy and delivery, to be immunised against tetanus, to learn about infant care, and be treated for existing conditions, such as malaria and anaemia.

Some 58 percent of mothers who had given birth in the last three years went for pre-natal consultations during their last pregnancy as compared to 53 percent in 2006-07 (Table 3.10). Attendance rates have increased in urban as well as rural areas. The attendance rate was much higher in urban (77 percent) than rural areas (50 percent). In rural areas, Punjab has the highest attendance and Balochistan the lowest. Islamabad with

97 percent, Karachi with 96 percent, Haripur with 90 percent and Lasbilla with 67 percent is at the top ranks within the districts, while Rajanpur with 33 percent, Tharparkar with 21 percent, Karak with 18, Kohlu with 10 percent are at the bottom ranks districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively. It appears that in many districts of Punjab and Sindh preference is given to private hospital while the trend is inverse in Khyber Pakhtunkhwa and Balochistan where majority of districts consulted public as first priority and to private as second priority. In Overall Pakistan, the three most commonly consulted sources were private hospital/clinic (47 percent), government hospital/clinic (26 percent) and Home TBA (10 percent).

Tetanus Toxoid injections are given to women during pregnancy to protect infants from neonatal tetanus, a major cause of infant death that is due to primarily unsanitary conditions during childbirth. In addition these injections protect women from developing tetanus themselves or suffering from sepsis. Two doses of tetanus Toxoid during pregnancy offer full protection. However, if a woman was vaccinated during a previous pregnancy, she may only need a booster to give full protection. Five doses are thought to provide lifetime protection. Some 68 percent of mothers as compared to 56 percent in 2006-07 had received a tetanus Toxoid injection during their last pregnancy. Islamabad with 97 percent, Karachi with 91 percent, Swabi with 93 percent and Ketch with 57 percent in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively are at top ranks within the provinces (Table 3.11).

The vast majority of births in 2008-09 took place at home (65 percent) as compared to 68 percent in 2006-07. In rural areas, some 75 percent deliveries took place at home as compared to 41 percent in urban areas. The trend of delivery at home is highest in Rajanpur with 96 percent, Tharparker with 93 percent, Shangla and Kohistan with 92 percent and Kohlu with 99 percent in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively. The most commonly cited source of assistance in rural areas was trained Dai, & traditional birth attendant (54 per cent of cases), followed by family member/relative (16 percent).

Post-natal consultation rates even though improved in 2008-09, are still much lower than the pre-natal rates cited above (Table 3.13). 25 percent of mothers received a post-natal check up within six weeks of delivery during their last pregnancy in 2008-09 as compared to 24 percent in 2006-07. Urban areas have higher rates than rural areas, though both were low. Islamabad with 77 percent, Hyderabad with 52 percent, Swat with 48 percent, Kharan and Gwadar with 30 percent are the top ranked districts for postnatal consultations in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively.

The three most commonly cited sources of post-natal care in rural areas were private hospital/clinic (43 percent), government hospital/clinic (19 percent), and traditional birth attendant at home (18 percent).

## **4. Housing, Water supply & Sanitation**

### **4.1 Introduction**

Most of the households in rural Pakistan do not have access to adequate potable water. Many also lack toilets and adequate sanitation systems. The Government aims to expand access to clean drinking water and to improve sanitation particularly in rural areas. The main Government strategy in rural water supply is to improve the performance and operation of local water supply systems by promoting community responsibility for the management and maintenance of systems. To improve sanitation in rural areas, the government is promoting the construction of household latrines, the construction of open surface drains with street pavements and providing hygiene education.

In this chapter, information is presented on housing, electricity, gas, water supplies and toilets.

### **4.2 Housing:**

87 per cent of households in 2008-09 reported that they have own dwelling units as compared to 86 percent in 2006-07 while 6 percent of households have rented dwelling units, about 6 percent have rent free units and only 1 percent households have subsidized housing units (Table 4.1). In Islamabad (Federal Capital), 41 percent (43 percent in 2006-07) households live in rented or subsidized rented units as compared to 49 percent (52 percent in 2006-07) who have their own housing units. In all other districts in the country people predominantly live in their own housing units. Narowal with 97 percent, Larkana and Jamshoro with 98 percent, Chitral with 98 percent and Panjgur with 97 percent are the districts where people predominantly live in their own housing units.

Table 4.2 shows percentage distribution of households for material used for "Roof". In overall Pakistan Wood/ Bamboo 41 percent (44 percent in 2006-07) is predominantly used as material for Roof construction followed by RCC/RBC 35 percent (32 percent in 2006-07) and Sheet/Iron 24 percent (24 percent in 2006-07). The use of Wood/Bamboo as material used for roof is highest in Balochistan (73 percent) as compared to other provinces. Mianwali with 79 percent and Bahawalnagar with 1 percent in Punjab, Tharparkar with 79 percent and Karachi with 1 percent in Sindh, Uppre Dir with 90 percent and Abbottabad with 9 percent in Khyber Pakhtunkhwa and Washuk with 98 percent and Quetta with 33 percent in Balochistan are highest and lowest districts using wood/bamboo as material for roof. Bahawalnagar with 91 percent, Dadu 54 percent, Karak 42 percent and Lasbilla 52 percent are top ranked districts using sheet/iron as material for roof construction.

Similarly, Table 4.3 shows percentage distribution of households for material used for the construction of "Walls". Burnt Bricks/ Blocks have been used in 72 percent housing unit in 2008-09 as compared to (69 percent in 2006-07) and (94 percent Urban

and 60 percent Rural). The use of Burnt Bricks/Blocks in Balochistan is considerably low as compared to other provinces except Quetta, Gawadar and urban Kohlu. Rajanpur with 51 percent in Punjab, Mirpurkhas with 48 percent in Sindh, D.I Khan with 69 percent in Khyber Pakhtunkhwa and Ziarat with 99 percent in Balochistan are the top districts using Mud/Mud Bricks as material for walls.

### **4.3 Electricity & Gas:**

Table 4.5 shows that 91 percent (87 percent in 2006-07) of households were using electricity while only 8 percent (12 percent in 2006-07) use gas and oil as a fuel for lighting. Punjab and Khyber Pakhtunkhwa with 93 percent have highest number of households having electricity connections as compared to other provinces. Rajanpur with 54 percent, Thatta with 42 percent, Kohistan with 43 percent and Kohlu with 26 percent have the lowest number of households with electricity connections in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively. In rural areas of Rajanpur, Badin, Kohistan and Lasbilla more than 51 percent of the households are using Gas/Oil as fuel for lighting. Dera Bugti has the highest percentage where 57 percent of households use Candle/Other for lighting.

Table 4.6 indicates that the vast majority (68 percent) of households are using wood/charcoal or other as fuel for cooking in rural Pakistan. This percentage is higher in rural areas (93 percent) as compared to only 23 percent of urban areas. 31 percent of households are using gas as fuel for cooking at national level as compared to 30 percent in 2006-07. Only 7 percent households in rural areas are using gas as fuel for cooking as compared to 78 percent in urban areas. Karachi followed by Quetta are the two top districts in the country with 95 percent and 91 percent gas connections, respectively. Layyah, Tharparkar, Upper Dir, Lower Dir, Shangle, Bunair, Tank, Kohistan, Lakki Marwat, Awaran, Panjgur and Musa Khel are the districts where 99 percent of the households do not have gas connections.

### **4.4 Sources of Drinking Water**

35 percent of households in overall Pakistan are using piped water as main source of drinking water. This percentage is higher in urban areas (62 percent) than in rural areas (21 percent). Hafizabad with 2 percent in Punjab, Shikarpur with 4 percent in Sindh, Kohistan with 8 percent in Khyber Pakhtunkhwa and Musa Khel and Barkhan with 1 percent only in the Balochistan are the districts within provinces which have lowest number of households with piped water facility as main source of drinking water. The main source of drinking water in rural areas in Pakistan is the hand pump (Table 4.7). Hand pumps and motor pumps together contributed 54 percent as compared to 52 percent in 2006-07. In rural areas hand pumps and motor pumps usage has increased to 65 percent in 2008-09 as compared to 62 percent in 2006-07. Moreover, the percentage of households depending upon lower water sources i.e. dug well and others either remained unchanged or slightly decreased. D.G Khan with 26 percent, Mirpurkhas with 36 percent,

Kohistan with 91 percent and Musa Khel with 93 percent are the districts where the usage of Dug well/other as source of drinking water is higher than other districts.

Khyber Pakhtunkhwa has the best rural water supply amongst the provinces in terms of tap water but on the other hand its 28 percent population depend on dug well or other poor sources (river, canal or stream). The vast majority of the rural population of Punjab has either hand pump or water from a motor pump<sup>1</sup> and only 5 per cent of the rural population depend on a dug well or other sources (river, canal or stream). Sindh-Rural has shown decrease in poor water supply sources from 21 percent in 2006-07 to 18 percent in 2008-09. In Khyber Pakhtunkhwa 32 percent of the rural population, depend on water from a dug well or from a river/canal/stream. The wide variation in water sources between provinces suggests strong cases for interventions targeted, especially, at Khyber Pakhtunkhwa and Balochistan.

#### 4.5 Toilets

In Pakistan as a whole, 22 per cent households do not have any toilet facility as compared to 27 percent in 2006-07 (Table 4.8). This varies greatly between urban and rural areas i.e. 2 per cent of urban households have no toilet facility as compared to 33 per cent of rural households. Rural areas have much poorer sanitation provision compared to drinking water provision. Jhang with 54 percent (64 percent rural) in Punjab, Thatta with 56 percent (68 percent rural) in Sindh, Kohistan with 59 percent (59 percent rural) and Kohlu with 87 percent (92 percent rural) are the top districts without any toilet facility. However, there seems to have been significant improvement in rural sanitation, with an improvement in the proportion of households without a toilet from 39 percent in 2006-07 going down to 33 percent in 2008-09. Rural Punjab has the highest proportion of households reporting no toilet at all i.e. 39 per cent and rural Sindh has the lowest, with 20 per cent.

95 percent of households in urban areas in 2008-09 were using flush toilets as compared to 92 percent in 2006-07. This percentage is highest in Punjab (96 percent) and lowest in Balochistan (75 percent). The top ranked districts within the province having Flush toilet facility are Rahim Yar Khan 96 percent, Karachi 98 percent, Peshawar 90 percent, and Quetta 88 percent. In rural Punjab high percentage of rural households (with the exception of rural Lahore (9 percent), Islamabad (10 percent), Gujranwala (11 percent)) are without any toilet facility. In other provinces situation is not as worse as of Punjab but still majority of districts do not have toilet facility for rural population.

---

<sup>1</sup> It is assumed that water from a hand pump is, generally, cleaner than from a dug well or river/canal/stream. However, it is important to note that water from a hand pump may sometimes be contaminated. Since no tests are carried out on water quality, the PSLM must depend on the type of water source used to provide an approximate indicator of quality.

## **1. Introduction**

### **1.1 The PSLM**

The Pakistan Social and Living Standards Measurement Survey is one of the main mechanisms for monitoring the implementation of the PRSP in the overall context of MDGs. It provides a set of district level representative, population-based estimates of social indicators and their progress under the PRSP. These include intermediate as well as 'output' measures, which assess what is being provided by the social sectors, e.g. enrolment rates in education. They include a range of 'outcome' measures, which assess the welfare of the population, e.g. Immunisation Rate. Policymakers need to know, for example, whether the poor have benefited from the programme or whether increased government expenditure on the social sectors has been captured by the better off.

In the remainder of this introduction, a description of the PSLM Survey 2008-09 is provided. Data relating education, health, household assets / amenities, immunisation, pre and postnatal care and satisfaction of services is given in the following chapters.

### **1.2 SAMPLE DESIGN OF PSLM SURVEY 2008-2009 (DISTRICT LEVEL)**

**Universe:** The universe of this survey consists of all urban and rural areas of the four provinces and Islamabad excluding military restricted areas.

**Sampling Frame:** FBS has developed its own urban area frame, which was up-dated in 2003. Each city / town has been divided into enumeration blocks consisting of 200-250 households identifiable through sketch map. Each enumeration block has been classified into three categories of income groups i.e. low, middle and high keeping in view the living standard of the majority of the people. List of villages published by Population Census Organization obtained as a consequence of Population Census 1998 has been taken as rural frame.

#### **Stratification Plan:**

**A. Urban Domain:** Islamabad, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Bahawalpur, Sargodha, Sialkot, Karachi, Hyderabad, Sukkur, Peshawar and Quetta have been considered as large sized cities. Each of these cities constitutes a separate stratum and has further been sub-stratified according to low, middle and high-income groups. After excluding population of large sized city (s), the remaining urban population in each district in all the provinces has been grouped together to form a stratum.

**B. Rural Domain:** Each district in the four provinces of Pakistan has been treated an independent stratum.

**Sample Size and its Allocation:** Keeping in view the objectives of the survey, the sample size for the four provinces has been fixed at 75188 households comprising 5298

sample villages / enumeration blocks, which is expected to produce reliable results at the district level.

**Sample Design:** A two-stage stratified sample design has been adopted in this survey.

**Selection of Primary Sampling Units (PSUs):** Villages in rural areas and enumeration blocks in urban areas have been taken as Primary Sampling Units (PSUs). Sample PSUs have been selected from strata/sub-strata with PPS method of sampling technique. Village wise population of 1998 census and enumeration block wise number of households collected in 2002-03 updation of urban sampling frame have been treated as measure of size for selection of sample PSUs in rural and urban strata, respectively.

**Selection of Secondary Sampling Units (SSUs):** Households within sample PSUs have been taken as Secondary Sampling Units (SSUs). A specified number of households i.e. 16 and 12 from each sample PSU of rural & urban area have been selected, respectively, using systematic sampling technique with a random start. Detailed sampling plan is attached at Appendix- A

### **1.3 Objectives and scope of analysis**

This is the third analytical report containing district level indicators of the PSLM Survey. It provides an overview of the findings in all sectors at district levels. Given that the PSLM is a large, complex household survey that collects information on a number of different topics, the tabulations presented here comprise the detailed tables at National/ Provincial/ District levels in continuation of the National / Provincial level report which has already been released

### **1.4 Data Quality and Reliability Measures**

Data quality in PSLM Survey has been ensured through built in system of checking of fieldwork by the supervisors in the field as well as teams from the headquarters. Regional/ Field offices ensured the data quality through preliminary editing at their office level. The entire data entry was carried out at the FBS headquarter Islamabad and the data entry programme used had a number of in built consistency checks. This is the 5<sup>th</sup> round of district level survey and it has been observed that overall indicators do follow the usual pattern at national/provincial levels. However, in certain districts particularly of Balochistan province there are variations in indicators between 2004-05, 2006-07 and 2008-09 which may be due to prevailing situation in the province, which probably lead to under/over reporting of events.

## PREFACE

Pakistan Social and Living Standards Measurement Survey (PSLM), 2008-09 is the fifth round of a series of surveys planned to be conducted up to 2015. The survey has been conducted with the aim to provide data for use by the government in formulating the poverty reduction strategy as well as development plans at district level and rapid assessment of programmes initiated under Poverty Reduction Strategy Paper (PRSP) and Medium Term Development Framework (MTDF) in the overall context of MDGs.

The survey has been conducted covering approximately 75,188 households to provide indicators in the sectors such as Education, Health, Water Supply & Sanitation and Household Economic Situation & Satisfaction by facilities and services use. The fieldwork was carried out between August 2008 and April 2009. This report provides information on the key social indicators at district level with urban/ rural breakdown.

The report contains five chapters. These are: Introduction, Education, Health, Housing, Water Supply & Sanitation, Household perception of economic situation and satisfaction by facilities and services use.

Comments and suggestions for improving future issues of this report will be most welcome.

SAEED AHMAD KHAN  
Secretary

Statistics Division  
Government of Pakistan

**NOTES:**

- 1.Gross enrolment rate: [Number of children attending middle level (classes 6 - 8) divided by number of children aged 10 - 12 years] multiplied by 100.
- 2.Numerator of GER: Raised sum of all individuals who report currently attending middle level (class 6 - 8).
- 3.Denominator of GER: Raised sum of all individuals aged 10 - 12 years who respond to the relevant questions.

**NOTES:**

- 1.Net enrolment rate: [Number of children aged 11 - 13 years attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100. Note that this age range is different from the one used in previous PIHS reports.
- 2.Numerator of NER: Raised sum of all individuals aged 11 - 13 years who report currently attending middle level.
- 3.Denominator of NER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

**NOTES:**

1. Gross enrolment rate: [Number of children attending matric level (classes 9 - 10) divided by number of children aged 14 -15 years] multiplied by 100.
2. Numerator of GER: Raised sum of all individuals who report currently attending Matric level.
3. Denominator of GER: Raised sum of all individuals aged 14 -15 years who respond to the relevant questions.

NOTES:

- 1.Net enrolment rate: [Number of children aged 14 - 15 years attending matric level (classes 9 - 10) divided by number of children aged 14 - 15 years] multiplied by 100.
- 2.Numerator of NER: Raised sum of all individuals aged 14 - 15 years who report currently attending matric level.
- 3.Denominator of NER: Raised sum of all individuals aged 14 - 15 years who respond to the relevant questions.

## NOTES:

1. Population aged 10 years and older that is literate expressed as a percentage of the population aged 10 years and older.
2. Literacy: For all surveys, literacy is taken as the ability to read a newspaper and to write a simple letter.

**NOTES:**

1. Gross enrolment rate: [Number of children attending primary level (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
2. Numerator of GER: Raised sum of all individuals who report currently attending primary level.
3. Denominator of GER: Raised sum of all individuals aged 5 - 9 years who respond to the relevant questions.

**NOTES:**

1. Gross enrolment rate: [Number of children attending primary level (classes 0-5) divided by number of children aged 4 - 9 years] multiplied by 100. Enrolment in katchi is included.

2. Numerator of GER: Raised sum of all individuals who report currently attending primary level.

3. Denominator of GER: Raised sum of all individuals aged 4- 9 years who respond to the relevant questions.

**NOTES:**

- 1.Net enrolment rate in government primary schools: [Number of children aged 5 - 9 years attending government primary schools (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
- 2.Numerator of NER: Raised sum of all individuals aged 5 - 9 years who report currently attending primary level in Government schools, excluding katchi.
- 3.Denominator of NER: Raised sum of all individuals aged 5 - 9 years who responded to the relevant questions.

**NOTES:**

- Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
- Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.

NOTES:

- Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
- Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.
- Based on record: Children who reported having received full immunisation who also have an immunisation card. expressed as a percentage of all children aged 12-23

**NOTES:**

1. Children who suffered from diarrhoea in the 30 days prior to the interview expressed as a percentage of all children aged less than 5 years.
2. Diarrhoea in past 30 days: All three surveys contained a question addressed to the mothers of all children aged less than 5 years where they were asked if they had suffered from an episode of diarrhoea in the past 30 days.
3. Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with the PSLMS 2004-05.

**NOTES:**

- 1.Diarrhoea cases where a practitioner was consulted expressed as a percentage of all diarrhoea cases during past 30 in children under 5 years.
- 2.Cases where a practitioner was consulted: For all the children that reported an episode of diarrhoea in the past 30 days the mothers were asked if they consulted a practitioner for the ailment. The statistics reported here represent the percentage of cases where a practitioner was consulted.
- 3.Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with PSLMS 2004-05.

**NOTES:**

1. Diarrhoea cases where ORS was administered to the child expressed as a percentage of all diarrhoea cases during the past 30 days in children under 5 years.
2. Cases where ORS was administered: For all children that reported an episode of diarrhoea in the past 30 days, the mothers were asked if ORS had been given to the child. The statistics reported here represent the percentage of cases where ORS was given to the child.
3. Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with PSLMS 2004-05.
