

## PREFACE

Pakistan Social and Living Standards Measurement Survey (PSLM), 2010-11 is the sixth round of a series of surveys planned to be conducted up to 2015. The survey has been conducted with the aim to provide data for use by the government to monitor development plans at district level and rapid assessment of programmes initiated under Medium Term Development Framework (MTDF) in the overall context of MDGs.

The survey has been conducted covering 76,546 households to provide indicators in the sectors such as Education, Health, Water Supply & Sanitation and Household Economic Situation & Satisfaction by facilities and services use. The fieldwork was carried out between July 2010 and June 2011. This report provides information on the key social indicators at district level with urban/ rural breakdown.

The report contains five chapters. These are: Introduction, Education, Health, Housing, Water Supply & Sanitation, Household perception of economic situation and satisfaction by facilities and services use. I would like to congratulate Mr. Arif Mehmood Cheema, Director General, FBS and the whole PSLM team for the successful completion of this gigantic task. The report is also available on website of FBS.

Comments and suggestions for improving future issues of this report will be most welcome.

ASIF BAJWA

# TABLE OF CONTENTS

## **PREFACE.....**

## **EXECUTIVE SUMMARY.....**

EDUCATION .....	
HEALTH .....	
HOUSING, WATER SUPPLY & SANITATION.....	
HOUSEHOLD PERCEPTION OF ECONOMIC SITUATION AND SATISFACTION BY FACILITIES AND SERVICES.....	

## **SUMMARY OF KEY INDICATORS.....**

### **1. INTRODUCTION.....**

1.1 THE MDGs, PRSP AND THE PSLM .....	
1.2 SAMPLE DESIGN OF PSLM SURVEY 2010-11 (DISTRICT LEVEL).....	
1.3 OBJECTIVES AND SCOPE OF ANALYSIS .....	
1.4 DATA QUALITY AND RELIABILITY MEASURES .....	

### **2. EDUCATION.....**

2.1 INTRODUCTION .....	
2.2 SCHOOL ATTENDANCE.....	
2.3 PRIMARY ENROLMENT RATES.....	
2.4 MIDDLE AND MATRIC ENROLMENT RATES .....	
2.5 LITERACY.....	

### **3. HEALTH.....**

3.1 INTRODUCTION .....	
3.2 SICK OR INJURED .....	
3.3 IMMUNISATION .....	
3.4 DIARRHOEA.....	
3.5 PRE-AND POST-NATAL CARE.....	

### **4. HOUSING, WATER SUPPLY & SANITATION.....**

4.1 INTRODUCTION .....	
4.2 HOUSING: .....	
4.3 ELECTRICITY & GAS: .....	
4.4 SOURCES OF DRINKING WATER.....	
4.5 TOILETS .....	

### **5. HOUSEHOLD PERCEPTION OF ECONOMIC SITUATION AND SATISFACTION BY FACILITIES AND SERVICE USE.....**

5.1 INTRODUCTION .....	
5.2 PERCEPTION OF ECONOMIC SITUATION.....	
5.3 SATISFACTION BY FACILITIES AND SERVICE USE.....	

### **APPENDIX A: SAMPLE DESIGN FOR PAKISTAN SOCIAL AND LIVING STANDARDS MEASUREMENT SURVEY DISTRICT LEVEL, 2010-11.....**

OBJECTIVES: .....	
UNIVERSE: .....	
SAMPLING FRAME .....	
STRATIFICATION PLAN.....	
SAMPLE SIZE AND ITS ALLOCATION:.....	
SELECTION OF PRIMARY SAMPLING UNITS (PSUs): .....	
SELECTION OF SECONDARY SAMPLING UNITS (SSUs):.....	
ESTIMATION PROCEDURES: .....	

### **APPENDIX B: CONFIDENCE INTERVALS.....**

# LIST OF TABLE

## Education

## ACKNOWLEDGEMENTS

Pakistan Social and Living Standards Measurement (PSLM) Survey with the addition of District level survey at every alternate year was started in the year 2004. It provides Social & Economic indicators in the alternate years at provincial and district level. The PSLM Survey represents a major contribution towards construction of district level data base on Education, Health, employment, Household Assets & Amenities, Income & Expenditure (for poverty analysis), Population Welfare, Water Supply and Sanitation etc. District level data has to meet the requirements of devolution plan of the government. The district level data provides valuable insights into the dynamics of poverty. In this way it will be possible to investigate the impact of a changing environment as a consequence of implementation of the government devolution plan. The data generated through surveys is being used to assist the government in formulating developments plans at district level and rapid assessment of programs initiated MTRF in the overall context of Millennium Development Goal's (MDG).

Fieldwork for 6<sup>th</sup> round of PSLM 2010-11 was based on 5411 urban & rural PSU's and respondents from the 76546 household provided data, this was started in July 2010 and completed in June 2011. This report has been prepared in a period of only two months following completion of the data collection work. This fourth report of PSLM District level survey after PSLM 2004-05, 2006-07 and 2008-09 provides information at National/ Provincial and District level with urban/ rural breakdown.

The timely completion of the 6<sup>th</sup> round of the PSLM District level report has been possible because of the enormous hard work and devotion put in by the PSLM/HIES management team at headquarters, the Data Processing Centre, PSLM/HIES field teams and Sample Design Section of the Federal Bureau of Statistics. It is indeed a matter of great pride for the whole organization.

Considering the requirements of the policy makers, planners, researchers and other data users, efforts have been made to improve the report. It is hoped that the data users will find this report useful and any further comments and suggestions for future improvement will be welcome and highly appreciated.

(ARIF MEHMOOD CHEEMA)  
Director General

Government of Pakistan  
Statistics Division  
Federal Bureau of Statistics  
Islamabad  
September, 2011

**APPENDIX A: SAMPLE DESIGN FOR PAKISTAN SOCIAL AND LIVING STANDARDS  
MEASUREMENT SURVEY DISTRICT LEVEL, 2010-11**

**Objectives:**

The data generated through PSLM Survey will be used to assist the government in formulating the poverty reduction strategy as well as development plans at district level. The indicators will be developed at district level in the following sectors.

1. Education
2. Health
3. Water Supply & Sanitation.
4. Household Assets/Amenities.
5. Satisfaction to Service Delivery.

**Universe:**

The universe of this survey consists of all urban and rural areas of all four provinces, from the scope of the survey.

**SAMPLING FRAME**

**Urban area:**

FBS has developed its own urban area frame. All urban areas comprising cities/ towns have been divided into small compact areas known as enumeration blocks (E.Bs) identifiable through map. Each enumeration block comprises about 200-250 households and categorized into low, middle and high-income group, keeping in view the socio economic status of the majority of households. Urban area sampling frame consists of 26698 enumeration blocks has been updated in 2003.

**Rural area:**

With regard to the rural areas, the lists of villages/mouzas/deh according to Population Census, 1998 have been used as sampling frame. In this frame, each village/mouzas/deh is identifiable by its Name, Had Bast Number, Cadastral map etc. This frame is comprised 50590 villages/mouzas

The numbers of enumeration blocks in urban and mouzas/dehs/villages in rural areas of the country are as under:

**NO. OF ENUMERATION BLOCKS AND VILLAGES AS PER SAMPLING FRAME**

<b>Province</b>	<b>Number of E. Blocks</b>	<b>Number of Villages</b>
Punjab	14,549	25,875
Sindh	9,025	5,871
Khyber Pakhtunkhwa	1,913	7,337
Balochistan	613	6,557
A.J.K	210	1,654
Northern Area	64	566
FATA		2,596
Islamabad	324	132
<b>Total</b>	<b>26,698</b>	<b>50,588</b>

## **STRATIFICATION PLAN**

### **Urban Areas:**

Within each district large sized cities having population five lack and above have been treated as independent stratum. Each of these cities has further been sub-stratified into low, middle and high group's areas. The remaining cities/towns within each district have been grouped together to constitute an independent stratum.

### **Rural Areas:**

The entire rural domain of a district for Punjab, Sindh, NWFP and Balochistan provinces has been considered as independent stratum.

### **Sample Size and its Allocation:**

To determine optimum sample size for this survey, analytical studies based on the results of Pakistan Demographic Survey, Labour Force and Pakistan Integrated Households Sample Survey were undertaken. Keeping in view the variability exist within the population for the characteristics for which estimates are to be prepared, population distribution, level of estimates and field resources available a sample size of 77488 households enumerated from 5413 sample PSUs (2280 from urban and 3133 from rural areas) has been considered sufficient to produce reliable estimates at district level in respect of all provinces. An Annexure-I showing sample sizes by districts in four provinces of Pakistan, is attached.

### **Sample Design:**

A two-stage Stratified Random Sampling scheme was adopted for this survey. Enumeration Blocks in urban areas and villages in rural areas were selected at first stage while households within the sample Enumeration Blocks / Villages were selected at second stage.

### **Selection of primary sampling Units (PSUs):**

Enumeration blocks in the urban domain and mouzas/deh/villages in rural domain have been taken as primary sampling units (PSUs). In urban domain sample PSUs from each stratum have been selected by probability proportional to size (PPS) method of sampling scheme using households in each block as measure of size (MOS). Similarly in rural areas, population of each village has taken as MOS for selection of sample villages using probability proportional to size method of selection.

### **Selection of Secondary Sampling Units (SSUs):**

Households within each sample Primary Sampling Unit (PSU) have been considered as Secondary Sampling Units (SSUs). 16 and 12 households have been selected from each sample village and enumeration block respectively by systematic sampling scheme with a random start.

### **Estimation Procedures:**

Detail of estimation procedures for estimates and their variances is attached as Annexure – II.

## Annexure-I

## Estimation Procedure:

### ESTIMATION PROCEDURE ADOPTED FOR PSLM SURVEY

#### NOTATIONS:

$N_h$  = Total number of Primary Sampling Units (PSUs) in the  $h$ th stratum of a province.

$n_h$  = Total number of sample PSUs in the  $h$ th stratum of a province.

$M_{hi}$  = Total number of Secondary Sampling Units (SSUs) in the  $i$ th sample PSU of  $h$ th stratum of a province.

$m_{hi}$  = Number of sample SSUs in the  $i$ th sample PSU of  $h$ th stratum of a province.

$P_{hi}$  = Assigned probability of selection of  $i$ th PSU of the  $h$ th stratum of a province.

$y_{hij}$  = Value of any characteristic  $y$  of  $j$ th SSU within  $i$ th PSU of  $h$ th stratum of a province.

$x_{hij}$  = Value of any characteristic  $x$  of  $j$ th SSU within  $i$ th PSU of  $h$ th stratum of a province with whose respect proportion is required.

#### (i): ESTIMATION FORMULAE FOR TOTALS AND THEIR VARIANCES

$$N = \sum_{h=1}^L N_h$$

$$n = \sum_{h=1}^L n_h$$

$$\bar{y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{p_{hi}}$$

OR

$$\bar{y}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{p_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} y_{hij}$$

$$\bar{y} = \sum_{h=1}^L \bar{y}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{p_{hi}}$$

For  $X$ , another variable of interest, we have

$$\bar{X}_h = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{P_{hi}} = \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{1}{P_{hi}} \frac{M_{hi}}{m_{hi}} \sum_{j=1}^{m_{hi}} x_{hij}$$

$$\bar{X} = \sum_{h=1}^L \bar{X}_h = \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{\bar{X}_{hi}}{P_{hi}}$$

$$\bar{R} = \frac{\bar{Y}}{\bar{X}}$$

$$v(\bar{y}_h) = \frac{1}{n_h} s_{ht}^2 = \frac{1}{n_h(n_h - 1)} \left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}} \right)^2}{n_h} \right)$$

$$v(\bar{Y}) = \sum_{h=1}^L \frac{1}{n_h} s_{ht}^2 = \sum_{h=1}^L \frac{1}{n_h(n_h - 1)} \left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}^2}{P_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{Y}_{hi}}{P_{hi}} \right)^2}{n_h} \right)$$

**(ii): FORMULA FOR RATIO ESTIMATES**

$$r = \frac{\bar{Y}}{\bar{X}}$$

Where  $\bar{Y}$  and  $\bar{X}$  can be estimated by equations under item (i) given above.

$$Rel V(r) = \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} s_{hb}^2 + \frac{1}{\bar{X}^2} \sum_{h=1}^L \frac{1}{n_h} \sum_{i=1}^{n_h} \frac{M_{hi}^2}{p_{hi}^2 m_{hi}} \frac{(M_{hi} - m_{hi})}{M_{hi}} s_{hw}^2$$

Where

$$s_{hb}^2 = s_{ht}^2 - s_{hw}^2$$

$$s_{ht}^2 = s_{hy}^2 + r^2 s_{hx}^2 - 2r s_{hxy}$$

$$s_{hx}^2 = \frac{1}{(n_h - 1)} \left[ \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}^2}{p_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \frac{\hat{X}_{hi}}{p_{hi}} \right)^2}{n_h} \right]$$

$$s^2_{hy} = \frac{1}{(n_h - 1)} \left[ \sum_{i=1}^{n_h} \frac{\bar{y}_{hi}^2}{p_{hi}^2} - \frac{\left( \sum_{i=1}^{n_h} \bar{y}_{hi} \right)^2}{n_h} \right]$$

$$s_{hxy} = \frac{1}{n_h - 1} \left[ \sum_{i=1}^{n_h} \left( \frac{\bar{x}_{hi}}{p_{hi}} \frac{\bar{y}_{hi}}{p_{hi}} \right) - \frac{\left( \sum_{i=1}^{n_h} \frac{\bar{x}_{hi}}{p_{hi}} \right) \left( \sum_{i=1}^{n_h} \frac{\bar{y}_{hi}}{p_{hi}} \right)}{n_h} \right]$$

$$s^2_{hw} = \frac{1}{n_h - 1} \sum_{i=1}^{n_h} \frac{1}{p_{hi}^2} \frac{M_{hi}^2 (M_{hi} - m_{hi})}{m_{hi} M_{hi}} s^2_{hi}$$

And

$$s^2_{hi} = s^2_{hiy} + r^2 s^2_{hix} - 2r s_{hixy}$$

$$s^2_{hiy} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} y_{hij}^2 - \frac{\left( \sum_{j=1}^{m_{hi}} y_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hix} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} x_{hij}^2 - \frac{\left( \sum_{j=1}^{m_{hi}} x_{hij} \right)^2}{m_{hi}} \right]$$

$$s^2_{hixy} = \frac{1}{(m_{hi} - 1)} \left[ \sum_{j=1}^{m_{hi}} x_{hij} y_{hij} - \frac{\left( \sum_{j=1}^{m_{hi}} x_{hij} \sum_{j=1}^{m_{hi}} y_{hij} \right)}{m_{hi}} \right]$$

## **2. EDUCATION**

### **2.1 Introduction**

One of the main objectives of the MDGs is the improvement in the percentage of literate population. Unfortunately literacy rates in Pakistan are very low when compared to other SAARC countries. The primary objective of government policy in the last few years has been to improve the level and quality of education in Pakistan. Government of Pakistan is to expand public provision of primary education and this measure can be used to assess whether government schools have increased their coverage of the population, by increasing enrolments faster than the growth in population. Great stress has been put on the primary level education because it forms the core of the literate population. Literacy and primary school enrolment rates in Pakistan have shown improvement during last five years but they are still low when compared to the countries of the region. The problem lies with the basic infrastructure and the simultaneously multiple systems of education that prove to be a stumbling block in imparting quality education. Scarcity of resources and the provision of adequate facilities and training are retarding the proper growth of educational system in Pakistan. However the current government strategy for the sector includes improving the functioning & utilisation of existing schools, improving the quality of education, increasing enrolment, improving access to education and expanding the primary education system.

Under the 18<sup>th</sup> Amendment Ministry of Education has been devolved and has become a provincial subject. For this purpose changes have been made in key areas of education sector i.e. Curriculum and syllabus, Centres of Excellence, Standards of education up to Grade 12, and Islamic Education Transferred to Provinces. Whereas Planning and Policy and Standards of education beyond Grade 12, covered under Federal Legislative List.

PSLM data on Education is a good source to monitor the progress in education sector with detailed comparison between the data results before and after the implementation of devolution. Federal Bureau of Statistics through PSLM survey will continue to produce key indicators on education with PSLM district/provincial level indicators on education being a good source for all provinces to overview weak area of province where serious and comprehensive efforts are required.

This chapter will cover key indicators on school attendance, enrolment rates and literacy.

### **2.2 School attendance**

The population of ten years and older that have ever attended schools is 60 percent in 2010-11 as compared to 59 percent in 2008-09 (Table 2.1). This proportion is much higher in urban areas than in rural areas and much higher in men than in women. Punjab and Sindh have the highest proportions that have ever attended school. Islamabad (85 percent) in Punjab, Karachi (80 percent) in Sindh, Abbottabad & Haripur (71 percent each) in Khyber Pakhtunkhwa and Quetta (65 percent) in Balochistan are the top ranked

districts. On the other hand, the districts at the bottom are Rajanpur (34 percent) in Punjab, Thatta (36 percent) in Sindh, Kohistan (22 percent) in Khyber Pakhtunkhwa, and Dera Bugti and Barkhan (15 percent) in Balochistan. These two Districts have the lowest Percentage of the population having ever attended in the entire country. Whereas, Islamabad (85 percent) has the highest value. As far as gender based differences are concerned, the greatest gender disparity is found in Khyber Pakhtunkhwa and Balochistan where Lakki Marwat (72 percent male and 15 percent female) and Pashin (75 percent male and 9 percent female) and Ziarat (73 percent male and 7 percent female). However, the lowest female enrolment is in Kohistan (6 percent) in Khyber Pakhtunkhwa and Dera Bugti (1 percent) in Balochistan.

Population having completed primary level remaining unaltered (49 percent) when compared with 2008-09 (Table 2.2). Islamabad with 76 percent in Punjab, Karachi with 72 percent in Sindh, Haripur with 61 percent in Khyber Pakhtunkhwa and Quetta with 54 percent in Balochistan are the best performing province wise top ranked districts. Whereas Rajanpur with 23 percent in Punjab, Thatta with 28 percent in Sindh, Kohistan with 13 percent in Khyber Pakhtunkhwa and Dera Bugti and Barkhan with 9 percent in Balochistan are the lowest in terms of school attendance. Islamabad (76 percent) surpasses all other districts in Pakistan whereas Dera Bugti and Barkhan (9 percent) fall behind in the lowest ranking. The widest gender differences are observed in Lakki Marwat district (61 percent male and 10 percent female) in Khyber Pakhtunkhwa and Pashin (66 percent male and 6 percent female) in Balochistan. Again the lowest female population that has ever attended school is found to be in Kohistan (2 percent).

## **2.3 Primary Enrolment Rates**

### ***Gross Enrolment Rates (GER)***

The GER, sometimes referred to as the participation rate, is the number of children attending primary schools divided by the number of children who ought to be attending. The GERs are presented in this report in two different ways: excluding and including the katchi class and for different age groups.

Table 2.3(a) shows the gross primary level enrolment rates at National/ Provincial/ District levels excluding katchi for the age group 5-9 years and Table 2.3 (b) for age 6-10 years. The GER at National level during 2010-11 slightly increased to 92 percent. In provinces, Punjab shows marginal increase from 97 percent in 2008-09 to 98 percent in 2010-11. Sindh remained stable with 84 percent, Khyber Pakhtunkhwa improved from 87 percent to 89 percent and Balochistan decreased slightly (from 75 percent to 74 percent) (Table 2.3 a). Chakwal with 125 percent, Karachi with GER of 106 percent, Haripur district with 116 percent and Mastung district with 121 percent are the top ranked districts whereas Bahawalpur with 71 percent, Tando Muhammad Khan with 53 percent, Kohistan district with 41 percent and Musa Khel district with 22 percent each are at the bottom ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively. While observing gender differences, wider gap found in Hangu district (102 percent for male and 52 percent for female) in Khyber Pakhtunkhwa and Qilla Abdullah (118 percent for male and 37 percent for female) in Balochistan.

The gross enrolment rate at National Level is 91 percent when katchi class is included and the age group is expanded to Children 4-9 years old (Table 2.4). The pattern within districts in the provinces is more or less similar to GERs without including katchi class.

The PSLM 2010-11 collected information on enrolment in all types of schools including the private and government sectors. Table 2.5 shows the gross enrolment rate in government primary schools. It is calculated as the number of children enrolled in government primary schools divided by the number of children of primary school age. Mianwali with 92 percent, Umerkot with GER at 89 percent, Upper Dir district with 99 percent and Mastung district with 119 percent are the top ranked districts whereas Gujranwala with 40 percent, Karachi with 28 percent, Kohistan district with 40 percent and Musa Khel district with 22 percent each are at the bottom GER in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively. Here an interesting fact is observed that apart from Islamabad, which has a rich facility of Government schools and colleges, the general trend in all other big cities is the preferences of private educational facilities over those provided by the government. Results reveals that the absence of private schools leaves no alternatives and makes government schools a priority in small cities.

### ***NET Enrolment Rates (NER)***

The NER at primary level refers to the number of students enrolled in primary schools of primary school age divided by the number of children in the age group for that level of education. In other words, for Pakistan, the official primary NER is the number of children aged 5 to 9 years attending primary level divided by the number of children aged 5 to 9 years.

The NER for Pakistan as a whole in 2010-11 is 56 per cent (Table 2.6 a) as compared to 57 percent in 2008-09. Comparing NERs for districts within the provinces, it is revealed that Chakwal with 81 percent, Hyderabad with 67 percent, Haripur with 72 percent and Mastung with 70 percent are at the top ranked districts, whereas Bahawalpur with 40 percent, Tando Muhammad Khan with 30 percent, Kohistan with 20 and Dera Bugti with 12 percent are the lowest ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively. Chakwal with 81 percent in Punjab is the best performing district and Dera Bugti with 12 percent in Balochistan is the lowest for overall Primary NER. Generally girls have a lower enrolment rate than boys and the difference is markedly larger in rural areas than in urban areas.

Table 2.8 shows the NER for government primary schools. This is the number of children aged 5-9 years enrolled in government primary schools divided by the total number of children aged 5-9. Like the gross enrolment rate for government schools, it measures the extent to which publicly provided education is reaching its target group. However, this measure excludes overage children who are enrolled in primary schools. The NER for Government primary schools within districts follows a similar pattern as observed for NERs for the entire primary enrolment.

The percentage of primary school students who are enrolled in government schools is shown in Table 2.9 (a). The government share of primary enrolment is 68 per cent in 2010-11 as compared to 70 percent in 2008-09. Rajanpur with 94 percent, Umerkot with 95 percent, Kohistan district with 97 percent and Pashin, Kohlu, Dera Bugti, Harnai, Khara, Awaran, Panjgur, Barkhan, Musa Khel, Jhal Magsi, Sherani and Bolan districts with 100 percent are the top ranked districts whereas Gujranwala with 36 percent, Karachi with 27 percent, Peshawar district with 55 and Quetta and Sibbi districts with 81 percent each are at the bottom in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively. The above analysis reflects that developed districts have larger share of private education whereas less developed districts mostly depend on government educational facilities.

## **2.4 Middle Enrolment Rates**

### ***Gross Enrolment Rates (GER)***

Gross and net enrolment rates for the middle level with age group 10-12 years old are presented in Tables 2.10(a) and 2.11(a). The gross enrolment rate for the middle level, for Pakistan as a whole, remained almost same as 2008-09 i.e. 54 percent. The middle level enrolment in urban areas remained same as in 2008-09 i.e. 71 percent as compared to a 47 percent (46 percent in 2008-09) in rural areas. Islamabad with 103 percent for middle class is top ranked in Pakistan. Rajanpur with 20 percent is at the bottom in Punjab. In the other three provinces Karachi with 72 percent, Chitral district with 93 percent and, Sibbi with 83 percent are the best performing districts while Tando Muhammad Khan with 21 percent, Kohistan with 16 percent and Dera Bugti with GER 2 percent are the worst performing districts in Sindh, Khyber Pakhtunkhwa and Balochistan. Gender based differences are more prevalent in Ziarat (male 78 percent GER, female 11 percent) in Balochistan and in Lakki Marwat (81 percent male and 21 percent female) district of Khyber Pakhtunkhwa. It is worth mentioning that Kohistan district of Khyber Pakhtunkhwa and Dera Bugti of Balochistan has shown no female middle level. Tables 2.10(b) and 2.11(b) have been added for GER & NER, respectively for middle level by changing age group from 10-12 to 11-13 for reader's information.

### ***NET Enrolment Rates (NER)***

Net enrolment rates at the middle level are much lower than gross enrolment rates (Table 2.11a). This is due to the large number of overage, children that are enrolled in these classes. The district level comparison within the provinces depicts that more or less NERs have the same patterns which are observed for GERs. Islamabad with 47 percent is at top in among all districts. Dera Bugti and Barkhan with 1 percent enrolments are at the bottom in the entire country showing that these are areas that need special attention.

## **2.5 Matric Enrolment Rates**

At matric level, gross enrolment stands at 57 percent as compared to 54 percent in 2008-09 and net enrolment rate is stable at 12 percent (Tables 2.12 a and 2.13a). Rawalpindi 103 percent has the highest and Musa Khel 6 percent has the lowest performance in the entire country. Rawalpindi with 103 percent, Karachi with 88 percent, Haripur with 88 percent and Harnai with 69 percent are at the peak. However, Rajanpur with 19 percent, Thatta with 25 percent, Kohistan with 11 percent and Musa Khel with 6 percent are at the lowest level in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan. Lakki Marwat with 85 percent for males and 15 percent for female in Khyber Pakhtunkhwa and Pashin with 153 percent for males and 18 percent for females have the greatest gender disparity in matric level. One striking feature is that female GER has the worst situation for matric level enrolment where there is no female enrolment in four districts i.e. Musa Khel, Panjgur, Kohlu and Dera Bugti.

### ***NET Enrolment Rates (NER)***

More or less same pattern is observed for NERs among districts within provinces. Tables 2.12(b) and 2.13(b) have been added for GER & NER, respectively, for matric level by changing age group from 13-14 to 14-15 for readers' information.

## **2.5 Literacy**

Literacy is an important indicator of education because its improvement is likely to have an impact, in the longer run, on other important indicators of welfare. The literacy rate for population 10 years and above is 58 percent during 2010-11, as compared to 57 percent in 2008-09 (Table 2.14 a). Literacy remains much higher in urban areas than in rural areas and much higher in men than in women. Province wise Punjab leads with 60 percent followed by Sindh with 59 percent, Khyber Pakhtunkhwa with 50 percent and Balochistan with 41 percent. Comparing Literacy (10 years and above) for districts within the provinces, it is revealed that Islamabad with 82 percent, Karachi with 79 percent, Haripur with 70 percent and Quetta with 64 percent are at the top ranked districts, whereas Rajanpur with 34 percent, Thatta with 36 percent, Kohistan with 26 and Dera Bugti & Barkhan with 6 percent are the lowest ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively. Dera Bugti in Balochistan (1 percent) and Kohistan in Khyber Pakhtunkhwa (6 percent) exhibit the lowest female literate population in the entire country. Adult literacy rate for the population aged 15 and above was 55 percent in 2010-11 as compared to 54 percent in 2008-09 (table 2.14b). The pattern among districts within the provinces is similar to the Literacy Rate of population 10 years and above.

## EXECUTIVE SUMMARY

This report presents district level findings in continuation of the report on the National/Provincial of the sixth round of the Pakistan Social and Living Standards Measurement (PSLM) Survey 2010-11. In this survey, 76546 households were covered in the entire country and information was collected from households on a range of social sector issues. These are primarily focussed on the main sectors i.e. Education, Health, Household Assets/ Amenities, Immunisation, Pre/Post Natal care of females and Household satisfaction by facilities and services in the overall context of Millennium Development Goals (MDGs).

Indicators between different groups are presented disaggregated by province/district, by region (urban-rural) and by gender. The indicators given in the report have been compared with the previous reports of PSLM surveys, wherever possible.

### Education

The Gross Enrolment Rate (GER) for primary schools (Age 5-9) during 2010-11 increased slightly from 91 percent in 2008-09 to 92 percent in 2010-11. At provincial level trends are more or less similar, Punjab with 98 percent (97 percent in 2008-09), Sindh with 84 percent (84 percent in 2008-09), Khyber Pakhtunkhwa with 89 percent (87 percent in 2008-09) and Balochistan with 74 percent (75 percent in 2008-09). Chakwal with GER at 125 percent, Karachi with 106 percent, Haripur with 116 percent, and Mastung with 121 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively. The Net Enrolment Rate (NER) have decline marginally from 57 percent in 2008-09 to 56 percent in 2010-11. It however remained substantially lower than the Gross Enrolment Rate because of the enrolment of overage children in primary schools. GER in Punjab is at 61 percent (62 Percent in 2008-09), Sindh is at 53 percent (54 Percent in 2008-09), Khyber Pakhtunkhwa is at 51 percent (52 Percent in 2008-09) and Balochistan is at 47 percent (44 Percent in 2008-09). Chakwal with 81 percent, Hyderabad with 67 percent, Haripur with 72 percent, and Mastung with 70 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively. The PSLM survey collects information on enrolment in all types of schools i.e. public and private. The PSLM round shows decrease in the share of primary enrolments that are in government schools. The overall share has decreased from 70 percent in 2008-09 to 68 percent in 2010-11.

The GER (Age 10-12) for middle level has remained constant at 54 percent and the NER has also remained stable at 20 percent at national level. At provincial level more or less similar pattern is observed as for GER primary. GER at middle level in Punjab is at 58 percent (57 percent in 2008-09), 48 percent in Sindh (49 percent in 2008-09), 57 percent in Khyber Pakhtunkhwa (54 percent in 2008-09) and 35 percent in Balochistan (36 percent in 2008-09). Islamabad with GER at 96 percent, Karachi with 72 percent, Chitral with 93 percent, and Sibbi with 83 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively. However, NER

which gives more realistic picture shows slight increase at provincial level, Punjab with 23 percent (22 Percent in 2008-09) has the highest middle NER followed by Sindh with 19 percent (18 Percent in 2008-09), Khyber Pakhtunkhwa with 17 percent (17 Percent in 2008-09) and Balochistan at 13 percent (11 Percent in 2008-09). Islamabad with 47 percent, Hyderabad with 28 percent, Haripur with 31 percent, and Harnai with 30 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively.

The Matric Level (Age 13-14) GER has increased from 54 percent in 2008-09 to 57 in 2010-11. At provincial level increase in primary enrolment in past years has clearly been observed, as GER of matric level of Punjab is at 61 percent (57 percent in 2008-09), Sindh is at 55 percent (50 percent in 2008-09), Khyber Pakhtunkhwa is at 54 percent (51 percent in 2008-09) and Balochistan is at 38 percent (34 percent in 2008-09). Whereas NER has remained unchanged with 12 percent in 2010-11. It is observed that the real impact of increase in GER and NER at matric level will be observable after four/five years when the existing primary level cohort reaches at Matric Level. Rawalpindi with 103 percent, Karachi with 88 percent, Haripur with 88 percent, and Harnai with 69 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively for Matric level GER. In Balochistan the NER at matric level is less than 20 percent.

The literacy level of population (10 years & above) has shown improvement. This has risen from 57 percent in 2008-09 to 58 percent in 2010-11. This increase has taken place for both men and women and across all provinces except Balochistan. Literacy rate in Punjab is at 60 percent (59 Percent in 2008-09), Sindh is at 59 percent (59 Percent in 2008-09), Khyber Pakhtunkhwa is at 50 percent (50 Percent in 2008-09) and Balochistan is at 41 percent (45 Percent in 2008-09). Islamabad with 82 percent, Karachi with 79 percent, Haripur 70 percent, and Quetta 64 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively. Adult literacy (15 years & above) has also increased from 54 percent in 2008-09 to 55 percent in 2010-11. Islamabad with 80 percent, Karachi with 79 percent, Haripur with 66 percent, and Quetta with 61 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively.

## **Health**

Two measures of immunisation coverage are presented in PSLM report. Based on mother's recall, at least one immunisation to the child remained same .i.e 97 percent. The measure that includes mother's recall as well as record of immunisations given to the child shows a rise from 78 percent in 2008-09 to 81 percent in 2010-11 in the proportion of one year old that are fully immunised. This increase has clearly been observed in all provinces as Punjab at 86 percent (85 Percent in 2008-09), Sindh at 75 percent (69 Percent in 2008-09), Khyber Pakhtunkhwa at 77 percent (73 Percent in 2008-09) and Balochistan at 53 percent (43 Percent in 2008-09). Chakwal with 99 percent, Karachi with 91 percent, Upper Dir with 92 percent, and Barkhan with 93 percent are top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively.

The proportion of children under five suffering from diarrhoea remained same i.e. 11 percent. No significant gap is observed among the province. Percentage of Children suffering from diarrhoea in Punjab is 11 percent (10 Percent in 2008-09), 12 percent in Sindh (12 Percent in 2008-09), 10 percent in Khyber Pakhtunkhwa (10 Percent in 2008-09) and 13 percent in Balochistan (6 Percent in 2008-09). Mianwali with 26 percent, Sanghar with 33 percent, Bannu with 33 percent and Harnai with 65 percent are the most affected districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively.

Pre Natal consultation for pregnant females during their last pregnancy has increased from 58 percent in 2008-09 to 64 percent in 2010-11. Pre-Natal consultations were much more common in urban than in rural areas however, rural areas has also shown considerable improvement. Islamabad with 93 percent, Karachi with 93 percent, Haripur with 76 percent and Harnai with 76 percent are at the top rank district within the provinces. The frequency of post-natal consultations has increased from 25 percent in 2008-09 to 28 percent in 2010-11. It is noticed that there is a big gap between pre-natal and post-natal consultation. Percentage of women having post natal consultation in Punjab is at 28 percent (25 percent in 2008-09), Sindh is at 34 percent (29 percent in 2008-09), Khyber Pakhtunkhwa is at 23 percent (23 percent in 2008-09) and Balochistan at 18 percent (15 percent in 2008-09). Islamabad with 72 percent, Hyderabad with 60 percent, Lower Dir with 47 percent, Harnai with 50 percent are the top ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively.

69 percent of pregnant women received Tetanus Toxoid injection in 2010-11 as compared to 68 percent in 2008-09. Province wise Punjab is at top with 77 percent (76 percent in 2008-09) followed by Sindh at 60 percent (57 Percent in 2008-09), Khyber Pakhtunkhwa at 61 percent (64 Percent in 2008-09) and Balochistan at 31 percent (24 Percent in 2008-09). Mandi Bahuddin with 96 percent in Punjab, Karachi with 94 percent in Sindh, Haripur with 90 percent in Khyber Pakhtunkhwa and Sherani with 75 percent in Balochistan are the top rank district within the provinces.

## **Housing, Water Supply & Sanitation**

The housing units by tenure reveal that 86 percent of households are living in their own dwelling units in 2010-11 as compared to 87 percent in 2008-09, while 7 percent of households have rented dwelling units and about 6 percent have rent free units and only 1 percent households are living in subsidized housing units. Islamabad has the highest percentage of households living in rented or subsidized rented units as compared to other districts. In PSLM 2010-11, the comparison of housing units by number of rooms with the 2008-09 indicate that housing units with one room have increased from 23 percent in 2008-09 to 25 percent in 2010-11, housing units with 2-4 rooms have decreased from 71 percent in 2008-09 to 69 percent in 2010-11, although houses with more than five rooms have marginally decreased from 6.50 percent in 2008-09 to 5.84 percent in 2010-11. The housing units using electricity (as fuel for lighting) remained constant i.e. 91 percent. District Narowal (100 percent) has the highest percentage of households using electricity for lighting. Use of Gas as fuel for cooking has increased

from 31 percent in 2008-09 to 34 percent in 2010-11. Karachi with 96 percent and Quetta with 94 percent are at top among districts in using gas as main fuel for cooking.

32 percent of the household in Pakistan are using tap water as main source of drinking water. Khyber Pakhtunkhwa with 45 percent has the highest percentage of households using tap water as main source of drinking water followed by Sindh 43 percent, Balochistan 36 percent and Punjab 24 percent. The vast majority of the rural population of Punjab (80 percent) are using hand pump or water from a motor pump as main source of drinking water followed by Sindh (68 percent). In rural Balochistan 53 percent of the population depends on a dug well or other sources (river, canal or stream), tap water is used as main source of drinking water in urban areas (87 percent), which is highest among all the provinces. Lahore with 80 percent, Karachi with 85 percent, Batagram 81 percent, and Quetta 95 percent are top ranked districts using tap water as main source of drinking water in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively.

Overall flush toilet is used by vast majority of households in Pakistan i.e. 66 percent. While 18 percent have no toilet facility. In rural areas of Pakistan, access to flush toilets has increased from 47 percent in 2008-09 to 51 percent in 2010-11. Households with no toilet in rural areas have declined from 33 percent in 2008-09 to 27 percent in 2010-11. Punjab with 72 percent is at top followed by Sindh 62 percent, Khyber Pakhtunkhwa 62 percent and Balochistan 31 percent. Lahore with 97 percent, Karachi with 97 percent, Chitral 86 percent, and Quetta 91 percent are top ranked districts having flush toilet facility in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces respectively.

### **Household Perception of Economic Situation and Satisfaction by Facilities and Services**

Households were asked to compare their economic situation with last year. In response to this question 40 percent in 2010-11 reported no change (44 percent in 2008-09), 43 percent reported worse or much worse (33 percent in 2008-09) and 17 percent reported better or much better (22 percent in 2008-09). However, when asked to compare the economic situation of the community where they live, 54 percent in 2010-11 reported the same (54 percent in 2008-09), 29 percent reported worse or much worse (19 percent in 2008-09) and 12 percent reported better or much better (21 percent in 2008-09).

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government. Overall satisfactions of Facilities/Services provided have been decline as compared to 2008-09. i.e. 31 percent in 2010-11 reported satisfaction with Govt Basic Health Facilities compared to 40 percent in 2008-09, 12 percent satisfied with the Family Planning Services compared to 15 percent in 2008-09, 61 percent with Schools compared to 63 percent in 2008-09, while satisfaction with Veterinary Services pre-dominantly rural (15 percent), Agriculture Extension all rural compared (15 percent) and with police (10 percent) remained almost same.

# **List of Officers Involved In PSLM Survey 2010-11**

The District report is produced by the efforts of the following officers of Federal Bureau of Statistics listed under the specific tasks:

## **PLANNING, EXECUTION OF SURVEY AND FINALIZATION OF REPORT:-**

§ Mr. Muhammad Ishaq Rana	Ex.Deputy Director General
§ Mr. Ayazuddin	Director / Project Director
§ Ms.Rabia Awan	Chief Statistical Officer
§ Mr. Saqib Sultan Khawar	Statistical Officer
§ Mr.Sharifullah	Statistical Officer
§ Mr.Sajid Akhtar Lodhi	Statistical Officer
§ Ms.Aisha Burki	Statistical Officer
§ Ms.Hina Kanwal	Statistical Officer
§ Ms.Kaneez Amna	Statistical Officer

## **Assisted By:-**

§ Ms.Kulsoom Fatima	Statistical Assistant
§ Ms.Samina Farooq	Statistical Assistant

## **Management Team:-**

§ Rana Muhammad Ismail	Statistical Officer
§ Shafqat Hussain	Statistical Officer
§ Ms. Safia Begum	Statistical Officer

### **3. HEALTH**

#### **3.1 Introduction**

The Government health strategy focuses on young, children and their mothers, particularly in rural areas. Government in conformity with its commitment seeks to improve the health needs of the country by delivering a set of basic health services to all. One of the most pressing needs addressed by government is to improve women's access to government health care. The government's strategy for primary health includes:

- Improving the efficiency and utilization of basic health care services, both preventive and curative.
- Improving programme designed by paying more attention to quality.
- Enhancing coverage and access of essential health services.
- Reduction in burden of disease and protecting the poor and under privileged population subgroup against risk factors.
- Increasing women's access by recruiting more female staff.

The Federal Ministry for Health has been devolved under 18<sup>th</sup> amendment as of June 2011. Since then health is a provincial subject and the funds along with other resources are being transferred to the provinces as per the constitutional requirements. It is worth mentioning here that all the departments of health ministry are to be absorbed gradually in the provincial governments. It is likely to improve the prevailing health care system and effectively increase its outreach of service delivery to the masses at the grass root level. The present setup at the provincial level will be further strengthened and linked up from province to districts, from district to tehsil level and from there to urban and rural localities.

PSLM survey data on Health is a good source to monitor the progress in Health sector with detailed comparison between the data results before and after the implementation of devolution. Federal Bureau of Statistics through PSLM survey will continue to produce key indicators on Health. PSLM district/provincial level indicators on Health are a good source for all provinces to overview weak areas of province where serious and comprehensive efforts are required.

PSLM survey covers key indicators on health sector even at the district level which are presented in this report, however, the recent crises of Dengue (Malaria) is not covered. Therefore for the recent survey questions have been included to find out its prevalence. The results will be made available as soon as the data will be finalized.

In this chapter, information is presented on a number of key indicators that include percentage of population who got sick or injured, type of health consultation, immunization, diarrhoea and pre-and post-natal care.

### **3.2 Sick or injured**

. During the reference period of two weeks prior to the date of interview 7 percent of the population in 2010-11 reported sick or injured as compared to 6 percent in 2008-09. Sindh and Khyber Pakhtunkhwa with 8 percent have comparatively higher prevalence of sick or injured population as compared to Punjab and Balochistan. Prevalence of sickness / injuries is lower in most of the districts in the Balochistan as compared to other provinces. Mianwali with 12 percent in Punjab, Tando Muhammad Khan district with 14 percent in Sindh, Karak with 14 percent in Khyber Pakhtunkhwa and Harnai with 28 percent in Balochistan at the top in respect of sick/injured population (Table 3.1). About 96 percent of population had some type of health consultation. Who have over 71 percent (71 percent in 2008-09) of sick or injured persons consulted private hospitals or doctors compared to 22 percent (20 percent in 2008-09) who visited public hospitals/dispensaries/ RHCs /BHUs for their treatment (Table 3.3). Apart from a few districts of Khyber Pakhtunkhwa and Balochistan which prefer public dispensary/hospital over private dispensary/hospital, the general trend is that private facilities are considered more reliable by people than public dispensary/hospital.

### **3.3 Immunization**

One of the primary objectives of the Government in health sector is to expand the coverage of immunization. Measuring immunization coverage in household surveys is not easy. Parents often do not have the children's immunization / health cards with full information on vaccinations received. Immunization rates based only on the information given on immunization cards ('record') may therefore, underestimate coverage. However, it has the benefit of using written information recorded by health workers.<sup>1</sup> The alternative is to ask parents about their child's vaccination history, and calculate coverage rates using this information ('recall'). This runs the risk that parents will not remember vaccinations and will confuse different types of vaccines or will confuse other injections with vaccinations. Neither measure is ideal; both are presented in this report to help make an informed judgment on trends. In this report, both of these measures use all children of the appropriate age range in the denominator.

According to the WHO guidelines, a child should receive a BCG vaccination to protect against tuberculosis, three doses of DPT to protect against diphtheria, pertussis, and tetanus, three doses of polio vaccine, and a measles vaccination. Table 3.4 presents immunisation rates for children aged 12-23 months, who have been immunised during

---

<sup>1</sup> Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.

the period 12 to 24 months prior to the survey. Overall, when recall and record measures are included, full immunisation rates (all the 8 recommended vaccines) showed a positive increase from 78 percent in 2008-09 to 81 percent in 2010-11. For fully immunized based on recall and record, Chakwal with 99 percent, Jamshoro and Karachi with 91 percent, Haripur with 93 percent, and Barkhan with 93 percent are top ranked districts while Bahawalpur with 68 percent Tando Muhammad Khan with 43 percent, Kohistan with 10 percent, Dera Bugti with 3 percent are the bottom ranked districts in Punjab, Sindh, Khyber Pakhtunkhwa, and Balochistan provinces, respectively.

Using the measure that includes recall & record, there is an increase in full immunization rates for urban areas, but in rural areas there is significant increase from 74 percent in 2008-09 to 79 percent in 2010-11. When considering the record based measure immunization rates, there is increase in urban areas from 60 percent in 2008-09 to 62 percent in 2010-11, and rural areas 46 percent in 2008-09 to 49 percent in 2010-11 respectively.

Coverage by antigen is given in Tables 3.5 and 3.6. The former is based on record, the later on record plus recall. Both measures have shown general improvement in the coverage of all antigens as compared with 2008-09.

### **3.4 Diarrhoea**

Dehydration caused by diarrhoea is a major cause of mortality among children. Childhood diarrhoea has been a serious health problem in Pakistan. Both its prevention, through improved water and sanitation, and the treatment of dehydration through oral rehydration salts (ORS) are goals of government. Home management of diarrhoea through oral rehydration salts (ORS) or a recommended home fluid (RHF) - can prevent many of these deaths. Preventing dehydration by increasing fluid intake is important strategy for managing diarrhoea.

The households were asked to report whether a child had diarrhoea in the 30 days prior to the survey. If so, a series of questions were asked whether they have consulted someone for it or not and whether ORS has been given to child or not.

Overall percentage of children who have suffered from diarrhoea in the 30 days prior to survey marginally increased from 10 percent in 2008-09 to 11 percent in 2010-11. Balochistan and Punjab have shown increase in diarrhoea cases while Sindh and Khyber Pakhtunkhwa have same trend. Mianwali with 26 percent, Sanghar with 33 percent, Bannu with 33 percent and Harnai with 65 percent are the most affected districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan respectively (Table 3.7).

In 91 per cent of diarrhoea cases a practitioner of some kind was consulted. The pattern of practitioner consultation in all districts of Punjab (except Gujrat with 68 percent and Rawalpindi with 76 percent), Sindh (except Tando Allah Yar with 67 percent) and Khyber Pakhtunkhwa (except Abbottabad with 51 percent) is the same.

However, Balochistan province shows a mixed pattern with the exception of Musa Khel district where no child has suffered from diarrhoea (Table 3.8). The use of ORS in diarrhoea cases has increased to 79 percent in 2008-09 from 76 percent in 2006-07. ORS is most likely to be used in Sindh, Khyber Pakhtunkhwa and Balochistan, whereas its use is lowest in Punjab. Use of ORS in case of diarrhoea is usually more prevalent in urban areas than rural areas. The pattern within the districts is more or less the same, which has been observed at provincial levels.

In cases of diarrhoea, the most likely type of practitioner to be consulted continues to be a private practitioner (69 percent in 2010-11 as compared to 73 percent in 2008-09) (Table 3.9). Basic health units (BHU) and rural health centers (RHC) were consulted by only 5 percent of cases in Pakistan, which gives some indication of the very limited use of the government primary health network for these kinds of curative services. However, in Balochistan 38 percent diarrhoea cases were consulted by government facilities and in most of the districts, government facilities such as hospitals, dispensaries and BHUs were consulted.

### **3.5 Pre-and post-natal care**

Quality prenatal care can contribute to the prevention of maternal mortality by detecting and managing potential complications and risk factors, including pre-eclampsia, anaemia, and sexually transmitted diseases. Pre-natal care also provides opportunities for women to learn the danger signs of pregnancy and delivery, to be immunised against tetanus, to learn about infant care, and be treated for existing conditions, such as malaria and anaemia.

Some 64 percent of mothers who had given birth in the last three years went for pre-natal consultations during their last pregnancy as compared to 58 percent in 2008-09 (Table 3.10). Attendance rates have increased in urban as well as rural areas. The attendance rate was much higher in urban (78 percent) than rural areas (55 percent). In rural areas, Punjab has the highest attendance and Balochistan has the lowest. Islamabad with 93 percent, Karachi with 93 percent, Haripur with 76 percent and Harnai with 76 percent is the top ranked districts, while Narowal with 35 percent, Tando Muhammad Khan with 29 percent, Kohistan with 19, Qilla Saifullah with 10 percent are at the bottom ranks districts in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively. It appears that in many districts of Punjab and Sindh preference is given to private hospital while the trend is reverse in Khyber Pakhtunkhwa and Balochistan where majority of districts give preferences to public hospitals as compared to private hospitals. Overall in Pakistan, the three most commonly consulted sources were private hospital/clinic (51 percent), government hospital/clinic (30 percent) and Home TBA (6 percent).

Tetanus Toxoid injections are given to women during pregnancy to protect infants from neonatal tetanus, a major cause of infant death that is due to primarily unsanitary conditions during childbirth. In addition these injections protect women from developing tetanus themselves or suffering from sepsis. Two doses of tetanus Toxoid during pregnancy offer full protection. However, if a woman was vaccinated during a previous

pregnancy, she may only need a booster to give full protection. Five doses are thought to provide lifetime protection. Some 69 percent of mothers as compared to 68 percent in 2008-09 had received a tetanus Toxoid injection during their last pregnancy. Mandi Bahuddin with 96 percent in Punjab, Karachi with 94 percent in Sindh, Haripur with 90 percent in Khyber Pakhtunkhwa and Sherani with 75 percent in Balochistan are the top ranked districts within the provinces (Table 3.11).

The vast majority of births in 2010-11 took place at home 58 percent as compared to 65 percent in 2008-09. In rural areas, some 68 percent deliveries took place at home as compared to 34 percent in urban areas. The trend of delivery at home is highest in Rajanpur with 94 percent, Tharparker with 87 percent, Kohistan with 97 percent and Dera Bugti with 97 percent in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, are top ranked districts where vast majority of deliveries are taken place at home respectively. The most commonly cited source of assistance in rural areas was trained Dai, & traditional birth attendant 33 percent, followed by family member/relative (16 percent).

Post-natal consultation rates even though improved in 2010-11, are still much lower than the pre-natal rates cited above (Table 3.13). 28 percent of mothers received a post-natal check-up within six weeks of delivery during their last pregnancy in 2010-11 as compared to 25 percent in 2008-09. Urban areas have higher rates than rural areas, though both were low. Islamabad with 72 percent, Larkana with 61 percent, Lower Dir with 47 percent, Harnai with 50 percent are the top ranked districts for postnatal consultations in Punjab, Sindh, Khyber Pakhtunkhwa and Balochistan, respectively.

The three most commonly cited sources of post-natal care in rural areas were private hospital/clinic (49 percent), government hospital/clinic (20 percent), and traditional birth attendant at home (17 percent).

## **5. Household Perception of Economic Situation and Satisfaction by Facilities and Service Use.**

### **5.1 Introduction**

Government is spending a lot to improve the economic situation of people and also investing considerable amount in providing different types of facilities / services, it is necessary for the government to have an overview of how the people perceive their wellbeing against the different policies adopted by government. This section provides the government with necessary information about the priority sectors to properly address the multifaceted problems and the areas of concern associated with these sectors. Accordingly the respondents were asked to give their perception in their economic as well as community improvement and how effectively services/ facilities were available to them.

### **5.2 Perception of Economic Situation**

Households were asked to compare their economic situation with last year. (Table 5.1) In response to this question, 40 percent in 2010-11 reported no change (44 percent in 2008-09), 43 percent reported worse or much worse (33 in 2008-09) and 16 percent reported better or much better (22 percent in 2008-09). Muzaffar Garh with 67 percent in Punjab, Dadu with 66 percent in Sindh, Kohistan with 72 percent in Khyber Pakhtunkhwa and Musa Khel with 91 percent in Balochistan are top ranked districts where the economic situations are worse or much worse according to perception of household as compared to other districts. However, when asked to compare the economic situation of the community where they live (Table 5.2), 54 percent in 2010-11 the same (as same as reported in 2008-09), 29 percent reported worse or much worse (19 percent in 2008-09) and 12 percent reported better or much better (21 percent in 2008-09).

### **5.3 Satisfaction by Facilities and Service Use**

Households were also asked to give opinion about their satisfaction of the Facilities / Services provided by the government (Table 5.3). In response to this question, 31 percent in 2010-11 reported satisfaction on Govt Basic Health Facilities (40 percent in 2008-09), 12 percent satisfied with the Family Planning Services (15 percent in 2008-09), 61 percent with Schools (63 percent in 2008-09), 15 percent with Veterinary Services pre-dominantly rural (15 percent in 2008-09), 15 percent with Agriculture Extension all rural (15 percent in 2008-09) and 10 percent with police (10 percent in 2008-09). Bhakhar in Punjab with 11 percent, Hyderabad and Karachi in Sindh with 16 percent, Kohistan in Khyber Pakhtunkhwa with 7 percent and Lasbilla in Balochistan with 10 percent have lowest satisfaction in respect of Basic Health Facilities. Chiniot with 45 percent, Thatta with 34 percent, Kohistan with 20 percent and Dera Bugti with 20 percent are reported to have the lowest satisfaction for Schooling Facilities. Only 8 percent households in rural Bhakhar, 0 percent in Karachi, 2 percent in Swat and 1 percent in Qilla Saifullah are satisfied with Veterinary Services, while no household reported satisfaction with Veterinary Services in Nushki. More or less the same pattern is observed for Agriculture Extension. The highest percentage (90 percentages) of households in Pakistan is dissatisfied with Police Services.

## 4. Housing, Water supply & Sanitation

### 4.1 Introduction

Most of the households in Pakistan do not have access to adequate potable water. Many also lack toilets and adequate sanitation systems. The Government aims to expand access to clean drinking water and to improve sanitation particularly in rural areas. The main Government strategy in water supply is to improve the performance and operation of local water supply systems by promoting community responsibility for the management and maintenance of systems. To improve the sanitation the government is promoting the construction of household latrines, the construction of open surface drains with street pavements and providing hygiene education.

In this chapter, information is presented on housing, electricity, gas, water supplies and sanitation.

### 4.2 Housing:

In overall Pakistan, 86 percent of households in 2010-11 reported that they have own dwelling units as compared to 87 percent in 2008-09 (Table 4.1). This percentage is higher in rural areas (91 percent) as compared to (76 percent) in urban areas. At provincial level trends are more or less similar, Punjab at 86 percent (88 Percent in 2008-09), Sindh at 84 percent (86 Percent in 2008-09), Khyber Pakhtunkhwa at 87 percent (88 Percent in 2008-09) and Balochistan at 89 percent (87 Percent in 2008-09) (Table 4.1). Balochistan have the highest proportion of households (89 percent) that have own dwelling units as compared to other provinces. In Islamabad (Federal Capital), 36 percent (41 percent in 2008-09) households live in rented or subsidized rented units and 55 percent (49 percent in 2008-09) of households have their own housing units. In all other districts in the country people predominantly live in their own housing units. Rajanpur with 98 percent in Punjab, Mitiari and Tharparker with 98.5 percent in Sindh, Chitral with 99 percent in Khyber Pakhtunkhwa and Ketch/Turbat with 99.6 percent in Balochistan are the districts where people predominantly live in their own housing units. On the other hand, the districts at the bottom are Lahore (71 percent) in Punjab, Mir Pur Khas (69 percent) in Sindh, Peshawar (72 percent) in Khyber Pakhtunkhwa, and Dera Bugti (60 percent) in Balochistan.

Table 4.2 shows percentage distribution of households for material used for "Roof". In overall Pakistan Wood/ Bamboo 36 percent (41 percent in 2008-09) is predominantly used as material for Roof construction. This percentage is higher in rural areas (48 percent) as compared to only (13 percent) in urban areas. An important point here is that in year 2008-09, some people were reporting TR/Garder in RCC/RBC and some were including it in the category Sheet/Iron. And similarly some districts i.e. Sargodha, Bhakhar, Khushab and Mianwali previously reported Garder-Bala in Wood/Bamboo. But for the year 2010-11, the field enumerators were specifically instructed to include TR/Garder & Garder-Bala in the category "Others" and were asked

to specify. Therefore, a marked increase will be observed in the category “Others”. In provinces, Punjab is at 31 percent (38 Percent in 2008-09), Sindh at 32 percent (36 Percent in 2008-09), Khyber Pakhtunkhwa at 51 percent (55 Percent in 2008-09) and Balochistan remained stable (73 percent) (Table 4.2). The use of Wood/Bamboo as material used for roof is highest in Balochistan (73 percent) as compared to other provinces. D.G Khan with 71 percent in Punjab, Tharparkar with 80 percent in Sindh, Kohistan with 88 percent in Khyber Pakhtunkhwa and Musa Khel with 97 percent in Balochistan are highest districts using Wood/Bamboo as material used for roof. Whereas Islamabad with 4.5 percent in Punjab, Karachi with 1.3 percent in Sindh, Haripur with 22 percent in Khyber Pakhtunkhwa and Sibbi with 43 percent in Balochistan are lowest districts using Wood/Bamboo as material used for roof. Layyah with 46 percent, Dadu 48 percent, Batagram 53 percent and Ziarat with 26 percent are top ranked districts using sheet/iron as material for roof construction. Bahawalnager with 86 percent, Ghotki 56 percent, Tank 32 percent and Sibbi with 35 percent are top ranked districts using “other” as material for roof construction.

Similarly, Table 4.3 shows percentage distribution of households for material used for the construction of “Walls”. In overall Pakistan, Burnt Bricks/Blocks have been used in 72 percent housing unit in 2010-11 (same in 2008-09). This percentage is higher in urban areas (95 percent) as compared to (61 percent) in rural areas. At provincial level, Punjab is at 83 percent (82 Percent in 2008-09), Sindh at 66 percent (67 Percent in 2008-09), Khyber Pakhtunkhwa at 54 percent (50 Percent in 2008-09) and Balochistan at 23 percent (22 percent in 2008-09) (Table 4.3). The use of Burnt Bricks/Blocks in Balochistan is considerably low as compared to other provinces except Quetta, Gawadar and urban Sibbi. Lahore with 99 percent in Punjab, Karachi with 98 percent in Sindh, Peshawar with 77 percent in Khyber Pakhtunkhwa and Quetta with 74 percent in Balochistan are the top districts using Burnt Bricks/Blocks as material for walls. Whereas D. G. Khan & Rajanpur with 36 percent in Punjab, Tharparker with 16 percent in Sindh, Chitral & Kohistan with 4 percent in Khyber Pakhtunkhwa and Harnai with 1 percent in Balochistan are the lowest ranked districts using Burnt Bricks/Blocks as material used for walls.

### **4.3 Electricity & Gas:**

Table 4.5 shows that 91 percent (same in 2008-09) of households were using electricity as a fuel for lighting. This percentage is higher in urban areas (98 percent) as compared to (88 percent) in rural areas. At provincial level, Punjab remained same ( 93 percent), Sindh at 90 percent (87 Percent in 2008-09), Khyber Pakhtunkhwa at 93 percent (94 Percent in 2008-09) and Balochistan at 72 percent (73 percent in 2008-09) (Table 4.5). Punjab and Khyber Pakhtunkhwa with 93 percent have highest number of households having electricity connections as compared to other provinces. Narowal with 100 percent in Punjab, Larkana with 99 percent in Sindh, Batagram with 100 percent in Khyber Pakhtunkhwa and Qilla Abdullah with 98 percent in Balochistan have the highest number of households with electricity connections. Whereas, Rajanpur with 61 percent in Punjab, Tharparker with 46 percent in Sindh, Kohistan with 57 percent in Khyber

Pakhtunkhwa and Dera Bugti with 9 percent in Balochistan have the lowest number of households with electricity connections. In rural areas of Rajanpur and Tharparker 44 percent of the households whereas in Chaghi 67 percent of the households are using Gas/Oil as fuel for lighting. Dera Bugti has the highest percentage where 35 percent of households use Candles for lighting.

Table 4.6 indicates that the vast majority (65 percent) of households are using wood/charcoal or other as fuel for cooking in overall Pakistan. This percentage is higher in rural areas (89 percent) as compared to only (17 percent) in urban areas. Overall 41 percent households in Punjab (46 percent in 2008-09), 45 percent in Sindh (47 Percent in 2008-09), 76 percent in Khyber Pakhtunkhwa (81 Percent in 2008-09) and 66 percent in Balochistan (78 percent in 2008-09) are using wood/charcoal as fuel for cooking (Table 4.6). At national level 35 percent of households are using gas as fuel for cooking as compared to 31 percent in 2008-09, whereas only 11 percent households in rural areas are using gas as fuel for cooking as compared to 83 percent in urban areas. Lahore with 87 percent in Punjab, Karachi with 96 percent in Sindh, Peshawar with 70 percent in Khyber Pakhtunkhwa and Quetta with 94 percent in Balochistan have the highest number of households using Gas/Oil for cooking. Whereas, only one percent of the households in Bhakhar in Punjab, Umer Kot in Sindh, Chitral & Bonair in Khyber Pakhtunkhwa and Barkhan & Musa Khel in Balochistan are using Gas/Oil as fuel for cooking. Karachi followed by Quetta, are the two top districts in the country with 96 percent and 94 percent having gas connections, respectively. Layyah, Upper Dir, Shangla, D.I Khan, Batagram, Kohistan, Nushki, Kharan, Barkhan, Musa Khel and Sherani are the districts where 98 percent of the households do not have gas connections.

#### **4.4 Sources of Drinking Water**

32 percent of households in overall Pakistan are using piped water as main source of drinking water (Table 4.7). This percentage is higher in urban areas (58 percent) than in rural areas (19 percent). At provincial level, Punjab is at 24 percent (28 percent 2008-09), Sindh remained same (43 Percent), Khyber Pakhtunkhwa at 45 percent (50 Percent in 2008-09) and Balochistan at 35 percent (38 percent in 2008-09). Lahore with 80 percent in Punjab, Karachi with 85 percent in Sindh, Batagram with 81 percent in Khyber Pakhtunkhwa and Quetta with 95 percent in the Balochistan are the districts within provinces which have highest number of households with piped water facility as main source of drinking water. Whereas, Jhang and Muzaffar Garh with 1 percent in Punjab, Larkana with 3 percent in Sindh, Kohistan with 8 percent in Khyber Pakhtunkhwa and Washuk & Dera Bugti with 4 percent in the Balochistan are the districts within provinces which have lowest number of households with piped water facility as main source of drinking water. The main source of drinking water in rural Pakistan is hand pump (38 percent). Hand pumps and motor pumps together contribute 55 percent as compared to 54 percent in 2008-09. In urban areas hand pumps and motor pumps usage has increased to 35 percent in 2010-11 as compared to 33 percent in 2008-09. Moreover, the percentage of households depending upon poor sources of water i.e. dug well, stream, river, pond or canal, either remained unchanged or slightly decreased. Jhang with 32 percent, Tharparker with 86 percent, Kohistan with 92 percent and Sherani with 100 percent are

the districts where the usage of Dug well, river, canal or stream as source of drinking water is higher than other districts.

Khyber Pakhtunkhwa has the best water supply amongst the provinces in terms of tap water but on the other hand its 30 percent population depend on dug well, river, canal or stream. The vast majority of the rural population of Punjab has either hand pump or water from a motor pump and only 7 per cent of the rural population depend on a dug well river, canal or stream as a source of drinking water. In Khyber Pakhtunkhwa 35 percent of the rural population, depend on water from a dug well, river, canal, stream.

#### **4.5 Toilets**

In Pakistan as a whole unavailability to toilet facility has declined, 18 percent households do not have any toilet facility as compared to 22 percent in 2008-09 (Table 4.8). This varies greatly between urban and rural areas i.e. 2 percent of urban households have reported no toilet facility as compared to 27 percent of rural households. Overall Punjab has the highest percentage of households reporting no toilet i.e. 23 percent while Sindh has the lowest percentage .i.e. 8 percent. In rural Punjab high percentage of rural households (with the exception of rural Islamabad (3 percent), Gujranwala (7 percent), and Sialkot (9 percent)) are without any toilet facility. In other provinces situation is not as worse as of Punjab but still many districts do not have toilet facility for rural population. In rural areas Rajanpur with 78 percent in Punjab, Thatta & Tharparker with 43 percent in Sindh, Kohistan with 66 percent in Khyber Pakhtunkhwa and Loralai with 63 percent in Balochistan are the districts with the highest percentage of households without any toilet facility.

At Provincial level, 72 percent of households in Punjab (69 percent in 2008-09), 62 percent in Sindh (60 Percent in 2008-09), 62 percent in Khyber Pakhtunkhwa (56 Percent in 2008-09) and 31 percent in Balochistan (24 percent in 2008-09) are using flush toilet facility.96 percent of households in urban areas in 2010-11 are using flush toilet facility as compared to 95 percent in 2008-09. This percentage is highest in Punjab (97 percent) and lowest in Balochistan (84 percent). The top ranked districts in urban areas within the province having flush toilet facility are Sheikhpura with 97 percent in Punjab, Karachi with 99 percent in Sindh, Lower Dir, and Abbottabad & Bannu with 99 percent in Khyber Pakhtunkhwa, and Quetta with 98 percent in Balochistan. The lowest ranked districts in urban areas within the province having flush toilet facility are Narowal with 68 percent in Punjab, Khairpur with 71 percent in Sindh, Upper Dir with 73 percent in Khyber Pakhtunkhwa, and Jhal Magsi with 47 percent in Balochistan.

# 1. Introduction

## 1.1 The PSLM

The Pakistan Social and Living Standards Measurement Survey is one of the main mechanisms for monitoring the implementation of the development projects and tracking of the MDGs. It provides a set of district level representative, population-based estimates of social indicators and their progress under the MDGs. These include intermediate as well as 'output' measures, which assess what is being provided by the social sectors, e.g. enrolment rates in education. They include a range of 'outcome' measures, which assess the welfare of the population, e.g. Immunisation Rate. Policymakers need to know, for example, whether the poor have benefited from the programme or whether increased government expenditure on the social sectors has been captured by the better off.

In the remainder of this introduction, a description of the PSLM Survey 2010-11 is provided. Data relating education, health, household assets / amenities, immunisation, pre and postnatal care and satisfaction of services is given in the following chapters.

## 1.2 SAMPLE DESIGN OF PSLM SURVEY 2010-2011 (DISTRICT LEVEL)

**Universe:** The universe of this survey consists of all urban and rural areas of the four provinces and Islamabad excluding military restricted areas.

**Sampling Frame:** FBS has developed its own urban area frame, which was updated in 2003. Each city / town has been divided into enumeration blocks consisting of 200-250 households identifiable through sketch map. Each enumeration block has been classified into three categories of income groups i.e. low, middle and high keeping in view the living standard of the majority of the people. List of villages published by Population Census Organization obtained as a consequence of Population Census 1998 has been taken as rural frame.

### **Stratification Plan:**

**A. Urban Domain:** Islamabad, Lahore, Gujranwala, Faisalabad, Rawalpindi, Multan, Bahawalpur, Sargodha, Sialkot, Karachi, Hyderabad, Sukkur, Peshawar and Quetta have been considered as large sized cities. Each of these cities constitutes a separate stratum and has further been sub-stratified according to low, middle and high-income groups. After excluding population of large sized city (s), the remaining urban population in each district in all the provinces has been grouped together to form a stratum.

**B. Rural Domain:** Each district in the four provinces of Pakistan has been treated an independent stratum.

**Sample Size and its Allocation:** Keeping in view the objectives of the survey, the sample size for the four provinces has been fixed at 76546 households comprising 5413 sample villages / enumeration blocks, which is expected to produce reliable results at the district level.

**Sample Design:** A two-stage stratified sample design has been adopted in this survey.

**Selection of Primary Sampling Units (PSUs):** Villages in rural areas and enumeration blocks in urban areas have been taken as Primary Sampling Units (PSUs). Sample PSUs have been selected from strata/sub-strata with PPS method of sampling technique. Village wise population of 1998 census and enumeration block wise number of households collected in 2002-03 updation of urban sampling frame have been treated as measure of size for selection of sample PSUs in rural and urban strata, respectively.

**Selection of Secondary Sampling Units (SSUs):** Households within sample PSUs have been taken as Secondary Sampling Units (SSUs). A specified number of households i.e. 16 and 12 from each sample PSU of rural & urban area have been selected, respectively, using systematic sampling technique with a random start.

Detailed sampling plan is attached at Appendix- A

### **1.3 Objectives and scope of analysis**

This is the third analytical report containing district level indicators of the PSLM Survey. It provides an overview of the findings in all sectors at district levels. Given that the PSLM is a large, complex household survey that collects information on a number of different topics, the tabulations presented here comprise the detailed tables at National/ Provincial/ District levels in continuation of the National / Provincial level report which has already been released

### **1.4 Data Quality and Reliability Measures**

Data quality in PSLM Survey has been ensured through built in system of checking of fieldwork by the supervisors in the field as well as teams from the headquarters. Regional/ Field offices ensured the data quality through preliminary editing at their office level. The entire data entry was carried out at the FBS headquarter Islamabad and the data entry programme used had a number of in built consistency checks. This is the 6<sup>th</sup> round of district level survey and it has been observed that overall indicators do follow the usual pattern at national/provincial levels. However, in certain districts particularly of Balochistan province there are variations in indicators between 2004-05, 2006-07, 2008-09 and 2010-11 which may be due to prevailing situation in the province, which probably lead to under/over reporting of events.

**NOTES:**

1. Gross enrolment rate: [Number of children attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100
2. Numerator of GER: Raised sum of all individuals who report currently attending middle level (class 6 - 8).
3. Denominator of GER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

**NOTES:**

1.Net enrolment rate: [Number of children aged 11 - 13 years attending middle level (classes 6 - 8) divided by number of children aged 11 - 13 years] multiplied by 100. Note that this age range is different from the one used in previous PIHS reports.

2.Numerator of NER: Raised sum of all individuals aged 11 - 13 years who report currently attending middle level.

3.Denominator of NER: Raised sum of all individuals aged 11 - 13 years who respond to the relevant questions.

**NOTES:**

1. Gross enrolment rate: [Number of children attending primary level (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
2. Numerator of GER: Raised sum of all individuals who report currently attending primary level.
3. Denominator of GER: Raised sum of all individuals aged 5 - 9 years who respond to the relevant questions.

**NOTES:**

1. Gross enrolment rate: [Number of children attending primary level (classes 0-5) divided by number of children aged 4 - 9 years] multiplied by 100. Enrolment in katchi is included.

2. Numerator of GER: Raised sum of all individuals who report currently attending primary level.

3. Denominator of GER: Raised sum of all individuals aged 4- 9 years who respond to the relevant questions.

**NOTES:**

1. Gross enrolment rate in government primary schools: [Number of children attending government primary schools (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Katchi is excluded.

2. Numerator of GER: Raised sum of all individuals who report currently attending primary level in Government schools.

3. Denominator of GER: Raised sum of all individuals aged 5 - 9 years who respond to the relevant questions.

NOTES:

- 1.Net enrolment rate in government primary schools: [Number of children aged 5 - 9 years attending government primary schools (classes 1-5) divided by number of children aged 5 - 9 years] multiplied by 100. Enrolment in katchi is excluded.
- 2.Numerator of NER: Raised sum of all individuals aged 5 - 9 years who report currently attending primary level in Government schools, excluding katchi.
- 3.Denominator of NER: Raised sum of all individuals aged 5 - 9 years who responded to the relevant questions.

**NOTES:**

1. Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
2. Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.

NOTES:

- Note that even the record-based measure cannot be based exclusively on vaccinations recorded on the health card, since it is not possible to identify the source of the information on each antigen. Instead, it is calculated for all children who had a health card, using all immunizations reported, whether or not these were recorded on the card. It is likely that most will have been recorded on the card.
- Full immunization means that the child has received: BCG, DPT1, DPT2, DPT3, Polio1, Polio2, Polio3 and measles.
- Based on record: Children who reported having received full immunisation who also have an immunisation card, expressed as a percentage of all children aged 12-23 month.

**NOTES:**

1. Children who suffered from diarrhoea in the 30 days prior to the interview expressed as a percentage of all children aged less than 5 years.
2. Diarrhoea in past 30 days: All three surveys contained a question addressed to the mothers of all children aged less than 5 years where they were asked if they had suffered from an episode of diarrhoea in the past 30 days.
3. Estimates of PIHS 98-99 & 2001-02 have been recalculated for children less than 5 years to make it comparable with the PSLMS 2004-05.

## NOTES:

1. Diarrhoea cases where ORS was administered to the child expressed as a percentage of all diarrhoea cases during the past 30 days in children under 5 years.
2. Cases where ORS was administered: For all children that reported an episode of diarrhoea in the past 30 days, the mothers were asked if ORS had been given to the child. The statistics reported here represent the percentage of cases where ORS was given to the child.
